Feeling Good The Science Of Well Being:

Feeling Good C. Robert Cloninger M.D.,2004-05-06 All human beings have spontaneous needs for happiness self understanding and love In Feeling Good The Science of Well Being psychiatrist Robert Cloninger describes a way to coherent living that satisfies these strong basic needs through growth in the uniquely human gift of self awareness The scientific findings that led Dr Cloninger to expand his own views in a stepwise manner during 30 years of research and clinical experience are clearly presented so that readers can consider the validity of his viewpoint for themselves The principles of well being are based on a non reductive scientific paradigm that integrates findings from all the biomedical and psychosocial sciences Reliable methods are described for measuring human thought and social relationships at each step along the path of self aware consciousness Practical mental exercises for stimulating the growth of self awareness are also provided The methods are supported by data from brain imaging genetics of personality and longitudinal biopsychosocial studies Feeling Good The Science of Well Being will be of value to anyone involved in the sciences of the mind or the treatment of mental disorders It will also interest theologians philosophers social scientists and lay readers because it provides contemporary scientific concepts and language for addressing the perennial human questions about being knowledge and conduct

Feeling Good C. Robert Cloninger,2023 Cloninger argues that everyone has a spontaneous need for happiness self understanding love He describes a way toward achieving psychological coherence that satisfies these needs providing a novel synthesis of neuroscience genetics biopsychosocial research complex networks The Science of Well-being Felicia A. Huppert,Nick Baylis,Barry Keverne,2005 How much do we know about what makes people thrive and societies flourish While a vast body of research has been dedicated to understanding problems and disorders we know remarkably little about the positive aspects of life the things that make life worth living This landmark volume heralds the emergence of a new field of science that endeavours to understand how individuals and societies thrive and flourish and how this new knowledge can be applied to foster happiness health and fulfillment and institutions that encourage the development of these qualities Taking a dynamic cross disciplinary approach it sets out to explore the most promising routes to well being derived from the latest research in psychology neuroscience social science economics and the effects of our natural environment Designed for a general readership this volume is of compelling interest to all those in the social behavioural and biomedical sciences the caring professions and policy makers It provides a stimulating overview for any reader with a serious interest in the latest insights and strategies for enhancing our individual well being or the well being of the communities in which we live and work **The Science of Well-Being** Ed Diener,2009-07-16 Major Theoretical Questions Theories about subjective well being have grown over the past several decades but have been re ned only slowly as adequate data have been compiled to test them We can characterize the theories describing happiness along several dimensions The rst dimension is whether the theory places the locus of happiness in external conditions such as income and status as many sociological theories do or

within the attitudes and temperament of the individual as many psychological theories do Some have maintained that people adapt to all circumstances over time so that only individual personality matters for producing happiness whereas others believe that economic and other societal factors are the dominant forces in producing well being Throughout my writings there is a mix of both the internal and external factors that influence well being A second dimension that characterizes scholarship on well being is the issue of whether the factors affecting well being are relative or absolute That is are there standards used by people at all times and places in judging their lives and in reacting to events Or are standards dependent on what other people possess on expectations and on adaptation levels based on past circumstances Again there is evidence supporting the role of both universal and relative standards People around the globe are probably influenced by common factors such as friendship versus loneliness but even these universal influences on happiness are probably subject to some degree of comparison depending on what the person is used to and what others have However some factors might be much more comparative than others in influences as Hsee Yang Li and Shen in press have described
