On Our Minds Eric M. Gander, 2003-12-02 There is no question more fundamental to human existence than that posed by the nature versus nurture debate For much of the past century it was widely believed that there was no essential human nature and that people could be educated or socialized to thrive in almost any imaginable culture Today that orthodoxy is being directly and forcefully challenged by a new science of the mind evolutionary psychology Like the theory of evolution itself the implications of evolutionary psychology are provocative and unsettling Rather than viewing the human mind as a mysterious black box or a blank slate evolutionary psychologists see it as a physical organ that has evolved to process certain types of information in certain ways that enables us to thrive only in certain types of cultures In On Our Minds Eric M Gander examines all sides of the public debate between evolutionary psychologists and their critics Paying particularly close attention to the popular science writings of Steven Pinker Edward O Wilson Richard Dawkins and Stephen Jay Gould Gander traces the history of the controversy succinctly summarizes the claims and theories of the evolutionary psychologists dissects the various arguments deployed by each side and considers in detail the far reaching ramifications social cultural and political of this debate Gander s lucid and highly readable account concludes that evolutionary psychology now holds the potential to answer our oldest and most profound moral and philosophical questions fundamentally changing our self perception as a species Boguslaw Pawlowski

Naturalism, Theism and the Cognitive Study of Religion Dr. Aku Visala, 2013-06-28 This book provides a critical philosophical analysis of the claim that contemporary cognitive approaches to religion undermine theistic beliefs. Recent scientific work into the evolution and cognition of religion has been driven by and interpreted in terms of a certain kind of philosophical and methodological naturalism. The book argues that such naturalism is not necessary for the cognitive study of religion and develops an alternative philosophical and methodological framework. This alternative framework opens the cognitive study of religion to theological and philosophical considerations and clarifies its relationship to other approaches to religious phenomena. This unique contribution to discussions regarding the philosophical and theological implications of the cognitive study of religion summarizes the so far fragmentary discussion, exposes its underlying assumptions, and develops a novel framework for further discussion.

Move Up Clotilde Rapaille, Andrés Roemer, 2015-04-30 With an abundance of data and evidence, Move UP explores the societal and biological factors that determine whether cultures are able to ascend socially, economically, and intellectually. This provocative, ambitious, and entertaining book devises a formula that will allow countries and individuals to assess their own potential for upward mobility. Drawing on science and statistics as much as on human instinct and emotion, Move UP reconsiders the modern world with a mission to improve it.

The Evolution of Mind Denise D. Cummins, Colin Allen, 1998 Our understanding of the human mind has radically changed in recent years from the unified mind once envisioned by René Descartes over three hundred years ago to a new understanding of mind as a set of specialized cognitive components gradually accumulated in our evolutionary past. As a result, many scientists and philosophers now believe that our minds emerged out of the same type of evolutionary processes that have shaped our bodies. In *The Evolution of Mind*, outstanding figures on the cutting edge of evolutionary psychology follow clues provided by current neuroscientific evidence to illuminate many puzzling questions of human cognitive evolution. With contributions from psychologists, ethologists, anthropologists, and philosophers, the book offers a broad range of approaches to explore the mysteries of the mind's evolution from investigating the biological functions of human cognition to drawing comparisons between human and animal cognitive abilities. This interdisciplinary work presents a comparative and evolutionary perspective on a wide variety of topics, including mental algorithms for reasoning about contingencies, quantities, social norms, and the minds of others; social play and communicative abilities; thought and language; and the role of Darwin's theory of natural selection in evolutionary psychology. Written in a highly readable style, *The Evolution of Mind* will appeal to a broad range of researchers and students and help set the agenda for the field for years to come.

Evolutionary Psychology David M. Buss, 2004 This revised text provides a comprehensive overview of the field of evolutionary psychology. It includes information on landmarks in human evolution, intuitive biology, women's long-term mating strategies, men's long-term mating strategies, and problems of kinship.

Theology, Evolution and the Mind Neil Spurway, 2009 In pre scientific thought mind itself and its religious perceptions particularly were considered gifts from God injected into a previously created world of matter By contrast all the contributors to this book accept an evolutionary account of life mind and its religious dispositions However they hold more divergent views on the relation of mind to body and brain on the validity of those religious dispositions and on how far even Christ and his predicted Second Coming may be seen as aspects of the evolutionary process The seventeen contributions are rewritten and extended versions of papers first delivered at the annual conference of the UK T M s Science and Religion Forum held at Canterbury Christ Church College in Sept 2007 Though most speakers were British representatives from The Netherlands Jordan Zimbabwe and USA also contributed Invited individual chapters consider the general pattern of evolutionary thought arguing that it can make a major contribution to the maturation of theology archeological evidence for the emergence of religion and the proposal that it was an inevitable phase in human evolution the contribution of religious concepts to the development of our species and the question whether that provides any ground for accepting them as true the unresolved debate whether mind is a separate entity from brain or a consequence of its activity and the melding of paleo anthropology with theology to provide an integrated account of humanity and its culmination in Christ Each of these papers is the subject of an individual expert response and they are all drawn together in an overview essay which concludes the first part of the book The second shorter part contains a selection from the papers contributed by registrants for the meeting Their topics are whether mathematics consists of truths discovered or thought forms developed by human minds ecological awareness as an evolutionary development the neurobiology of freewill and sin an evolutionary perspective on holistic medicine and the impressive fruitfulness of juxtaposing neurophysiological and biblical concepts of the human body mind
