

Electrical Terms For Circuits

AC (Alternating Current) — An electric current that reverses its direction many times a second at regular intervals.

DC (Direct Current) — An electric current that flows in only one direction.

Feeder — All circuit conductors between the service equipment, the source of a separately derived system, or other power supply source and the final branch-circuit overcurrent device.

Fuse — A circuit interrupting device consisting of a strip of wire that melts and breaks an electric circuit if the current exceeds a safe level. To restore service, the fuse must be replaced using a similar fuse with the same size and rating after correcting the cause of failure.

Ground or Earth — The reference point in an electrical circuit from which voltages are measured, a common return path for electric current, or a direct physical connection to the Earth.

Ground Fault — An unintentional, electrically conductive connection between an ungrounded conductor of an electrical circuit and the normally non-current-carrying conductors, metallic enclosures, metallic raceways, metallic equipment, or earth.

Grounded Conductor — A system or circuit conductor that is intentionally grounded.

Grounded (Grounding) — Connected (connecting) to ground or to a conductive body that extends the ground connection.
