Electromagnetics John D. Kraus, Keith R. Carver, 1973 **Books in Print** ,1981 **Catalog of Copyright Entries. Third Series** Library of Congress. Copyright Office, 1954 Includes Part 1A Number 1 Books January June and Part 1B Number 1 Pamphlets Serials and Contributions to Periodicals January June *Integral Equation Techniques in Transient Electromagnetics* Dragan Poljak, C. Y. Tham, 2003 Transient electromagnetic phenomena can be treated in two ways either using direct time domain modeling or frequency domain analysis applying the inverse Fourier transform Both approaches are important since each has distinct advantages depending on the situation or the application **Catalogue for the Academic Year** Naval Postgraduate School (U.S.), 1958 *Antenna Handbook* Y.T. Lo, S. W. Lee, 2013-06-29 Techniques based on the method of modal expansions the Rayleigh Stevenson expansion in inverse powers of the wavelength and also the method of moments solution of integral equations are essentially restricted to the analysis of electromagnetic radiating structures which are small in terms of the wavelength It therefore becomes necessary to employ approximations based on high frequency techniques for performing an efficient analysis of electromagnetic radiating systems that are large in terms of the wavelength One of the most versatile and useful high frequency techniques is the geometrical theory of diffraction GTD which was developed around 1951 by J B Keller 1 2 3 A class of diffracted rays are introduced systematically in the GTD via a generalization of the concepts of classical geometrical optics GO According to the GTD these diffracted rays exist in addition to the usual incident reflected and transmitted rays of GO The diffracted rays in the GTD originate from certain localized regions on the surface of a radiating structure such as at discontinuities in the geometrical and electrical properties of a surface and at points of grazing incidence on a smooth convex surface as illustrated in Fig 1 In particular the diffracted rays can enter into the GO shadow as well as the lit regions Consequently the diffracted rays entirely account for the fields in the shadow region where the GO rays cannot exist **Books in Print Supplement** ,1985 *Books in Series* ,1985 Vols for 1980 issued in three parts Series Authors and Titles *Smart Materials, Structures, and Systems* ,2003 *Nuclear Science Abstracts* , NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976 pre dating the prestigious INIS database which began in 1970 NSA existed as a printed product Volumes 1 33 initially created by DOE s predecessor the U S Atomic Energy Commission AEC NSA includes citations to scientific and technical reports from the AEC the U S Energy Research and Development Administration and its contractors plus other agencies and international organizations universities and industrial and research organizations References to books conference proceedings papers patents dissertations engineering drawings and journal articles from worldwide sources are also included Abstracts and full text are provided if available *McGraw-Hill Encyclopedia of Science & Technology* ,1987 *Subject Guide to Books in Print* ,1991 **Physical Fundamentals of Remote Sensing** Erwin Schanda, 2012-12-06 Ten years ago the author together with eight co authors edited a textbook Remote Sensing for Environmental Sciences within the

series on Ecological Studies of Springer Verlag At that time there were not yet many books available on remote sensing The decade that has elapsed was marked by a spectacular development in this field This development took place in many directions by widening the areas of application by improvements of the methods and the sensors by the introduction of new versatile platforms but also by deepening the knowledge of the theoretical foundations This evolution improved the ability to explain the interaction between electromagnetic radiation and natural objects which in its turn allowed for better modelization and for the creation of refined mathematical tools in the processing of remotely sensed data and in the determination of the physical status of remote objects The community of research workers engaged in development and use of remote sensing methods changed accordingly from a modest group of scientists in the early 1970 s to a considerable branch of specialized and interdisciplinary activity The training of students had to be adapted to cope with the increasing number of people entering this new field and with the increasing quality of the material to be presented **IEEE**
