Osif, 2011-08-09 With the encroachment of the Internet into nearly all aspects of work and life it seems as though information is everywhere However there is information and then there is correct appropriate and timely information While we might love being able to turn to Wikipedia for encyclopedia like information or search Google for the thousands of links on a topic engineers need the best information information that is evaluated up to date and complete Accurate vetted information is necessary when building new skyscrapers or developing new prosthetics for returning military veterans While the award winning first edition of *Using the Engineering Literature* used a roadmap analogy we now need a three dimensional analysis reflecting the complex and dynamic nature of research in the information age *Using the Engineering Literature Second Edition* provides a guide to the wide range of resources available in all fields of engineering This second edition has been thoroughly revised and features new sections on nanotechnology as well as green engineering The information age has greatly impacted the way engineers find information Engineers have an effect directly and indirectly on almost all aspects of our lives and it is vital that they find the right information at the right time to create better products and processes Comprehensive and up to date with expert chapter authors this book fills a gap in the literature providing critical information in a user friendly format **Non-functional Requirements in Systems Analysis and Design** Kevin MacG.

Adams, 2015-04-23 This book will help readers gain a solid understanding of non functional requirements inherent in systems design endeavors It contains essential information for those who design use and maintain complex engineered systems including experienced designers teachers of design system stakeholders and practicing engineers Coverage approaches non functional requirements in a novel way by presenting a framework of four systems concerns into which the 27 major non functional requirements fall sustainment design adaptation and viability Within this model the text proceeds to define each non functional requirement to specify how each is treated as an element of the system design process and to develop an associated metric for their evaluation Systems are designed to meet specific functional needs Because non functional requirements are not directly related to tasks that satisfy these proposed needs designers and stakeholders often fail to recognize the importance of such attributes as availability survivability and robustness This book gives readers the tools and

knowledge they need to both recognize the importance of these non functional requirements and incorporate them in the design process
