WHAT IS ELECTRICITY?

What is electricity made of?

Electricity is the flow of electrical energy caused by the movement of tiny particles called electrons, one of the building blocks of atoms. Every atom has three basic component parts:

Electrons
(negatively charged particles)

Neutrons
(particles with no charge)

Protons
(positively charged particles)

When the attraction between protons and electrons is not strong enough in an atom, electrons can be freed from their orbits by an outside force and move to nearby atoms.

The shift in electrons between atoms results in **electricity**, which is then used to power your home.
