**Electricity and Magnetism in Biology and Medicine** Ferdinando Bersani,2012-12-06 In the last few decades the research on bioelectromagnetics has expanded worldwide About one thousand researchers are now working in the field in a variety of institutions throughout the world including medical biological engineering and technical laboratories and protection agencies After many years of research a clear picture is now emerging Initially the research was mainly interested in the therapeutic applications of ELF electric and magnetic fields and the RF range was mainly taken into consideration with respect to thermal effects only Then the growing body of biological effects of ELF fields on cells and biological tissues particularly for the repair processes in bone have drawn the attention of researchers to non thermal effects ranging from static fields to microwaves A specific field of interest that has been the object of a large debate in the last twenty years has been the potential health risk associated with electric power production and distribution and more recently with domestic and industrial appliances In the last few years the explosion of the market for cellularphones has highlighted the issue of possible health dangers related to their use and to the widespread presence of base stations The first World Congress on Electricity and Magnetism in Biology and Medicine was held in Orlando Florida in 1992 and collected the widest amount of contributions from almost all the major researchers involved in the field

*Advances in Electromagnetic Fields in Living Systems* James C. Lin,2011-09-26

Hardly any phenomenon in the modern environment is as ubiquitous as electromagnetic fields and waves We have learned to understand the physical characteristics of these energy forms and we have applied them in abundant ways to embellish our ways of life and our standards of living Furthermore we have come to depend on them for health safety information comfOli and conveyance Apart from their intended roles these electromagnetic fields and waves produce other effects which may influence the activities of living organisms The effects produced depend on many physical chemical and biological factors

They may be grossly apparent and visible soon after exposure of the living organism or they may not appear to have influenced the organism at all upon casual examination. Even then there may be subtle changes which are only detectable upon careful chemical or microscopic study or which are apparent only after a considerable time delay. Nevertheless our understanding of the interaction of electromagnetic fields with living systems is advancing in a wide range of topical areas. This bi annual series with invited reviews by recognized leaders in their respective specialties will present progress to date in key areas of research and scholarship. The guiding philosophy of this undertaking is the presentation of integrated known and confirmed phenomenological observations, basic mechanism of interactions and applications in biology and medicine as well as perspectives on current topics of interest.
