Reading and Writing the Electronic Book Catherine C. Marshall, 2010 Developments over the last 20 years have fueled considerable speculation about the future of the book and of reading itself This book begins with a gloss over the history of electronic books including the social and technical forces that have shaped their development The focus then shifts to reading and how we interact with what we read basic issues such as legibility annotation and navigation are examined as aspects of reading that eBooks inherit from their print legacy Because reading is fundamentally communicative I also take a closer look at the sociality of reading how we read in a group and how we share what we read Studies of reading and eBook use are integrated throughout the book but Chapter 5 goes meta to explore how a researcher might go about designing his or her own reading related studies No book about eBooks is complete without an explicit discussion of content preparation i e how the electronic book is written Hence Chapter 6 delves into the underlying representation of eBooks and efforts to create and apply markup standards to them This chapter also examines how print genres have made the journey to digital and how some emerging digital genres might be realized as eBooks Finally Chapter 7 discusses some beyond the book functionality how can eBook platforms be transformed into portable personal libraries In the end my hope is that by the time the reader reaches the end of this book he or she will feel equipped to perform the next set of studies write the next set of articles invent new eBook functionality or simply engage in a heated argument with the stranger in seat 17C about the future of reading Table of Contents Preface Figure Credits Introduction Reading Interaction Reading as a Social Activity Studying Reading Beyond the Book References Author Biography *Research and Advanced Technology for Digital Libraries* Stefan Gradmann, Francesca Borri, Carlo Meghini, Heiko Schuldt, 2011-09-15 This book constitutes the refereed proceedings of the

Bodanis's E MC2 The Battery is the first popular history of the technology that harnessed electricity and powered the greatest scientific and technological advances of our time. What began as a long running dispute in biology involving a dead frog's twitching leg, a scalpel and a metal plate would become an invention that transformed the history of the world: the battery. From Alessandro Volta's first copper and zinc model in 1800 to twenty first century technological breakthroughs, science journalist Henry Schlesinger traces the history of this essential power source and demonstrates its impact on our lives. Volta's first battery not only settled the frog's leg question, it also unleashed a field of scientific research that led to the discovery of new elements and new inventions, from Samuel Morse's telegraph to Alexander Graham Bell's telephone to Thomas Edison's incandescent lightbulb. And recent advances like nanotechnology are poised to create a new generation of paradigm shifting energy sources. Schlesinger introduces the charlatans and geniuses, paupers and magnates attracted to the power of the battery, including Michael Faraday, Guglielmo Marconi, Gaylord Wilshire and Hugo Gernsback, the publisher and would be inventor who coined the term science fiction. A kaleidoscopic tour of an ingenious invention that helped usher in the modern world. The Battery is as entertaining as it is enlightening. **Sessional Papers** Ontario. Legislative Assembly, 1912
