Handbook for Evaluating Knowledge-Based Systems Leonard Adelman, Sharon L. Riedel, 2012-12-06 Knowledge based systems are increasingly found in a wide variety of settings and this handbook has been written to meet a specific need in their widening use While there have been many successful applications of knowledge based systems some

applications have failed because they never received the corrective feedback that evaluation provides for keeping development focused on the users needs in their actual working environment This handbook provides a conceptual framework and compendium of methods for performing evaluations of knowledge based systems during their development Its focus is on the users and subject matter experts evaluation of the usefulness of the system and not on the developers testing of the adequacy of the programming code The handbook permits evaluators to systematically answer the following kinds of questions Does the knowledge based system meet the users task requirements Is the system easy to use Is the knowledge base logically consistent Does it meet the required level of expertise Does the system improve performance The authors have produced a handbook that will serve two audiences a tool that can be used to create knowledge based systems practitioners developers and evaluators and a framework that will stimulate more research in the area academic researchers and students To accomplish this the handbook is built around a conceptual framework that integrates the different types of evaluations into the system of development process The kinds of questions that can be answered and the methods available for answering them will change throughout the system development life cycle And throughout this process one needs to know what can be done and what can t It is this dichotomy that addresses needs in both the practitioner and academic research audiences

Cognitive Systems Engineering for User-computer Interface Design, Prototyping, and Evaluation Stephen J. Andriole, Leonard Adelman, 2023-05-31 This volume seeks to answer the question Can findings from cognitive science enhance the user computer interaction process In so doing it recognizes that user computer interfaces UCIs are often essential parts of an information or decision support system and often critical components of software intensive systems of all kinds From the outset the authors note that the design prototyping and evaluation of user computer interfaces are part of larger systems and are therefore ideally designed developed and evaluated as part of a larger design and developmental process or life cycle Thus this book describes the process by which functional nonfunctional or display oriented requirements are converted first into prototypes and then into working systems While the process may at times seem almost mysterious there is in fact a methodology that drives the process a methodology that is defined in terms of an adaptive life cycle There are a number of steps or phases that comprise the standard life cycle as well as methods tools and techniques that permit each step to be taken Describing the effort to implement this process to enhance user computer interaction this book presents a methodological approach that seeks to identify and apply findings from cognitive science to the design prototyping and evaluation of user computer interfaces

The Future of Predictive Safety Evaluation D.V. Parke,J. Marks,2012-12-06 A N WORDEN D V PARKE AND J MARKS THE BACKGROUND There is nothing new about the fact that chemical substances derived either from natural products or by synthetic means can give rise to toxicity in animals and human beings and that they must be subjected to controls The earliest writings speak of such toxicity and from the times of ancient Egypt and in the Old Testament controls have existed 1 In the Middle Ages Paracelsus 1493 1541 noted that All things are poisons for there is nothing without poisonous qualities It is only the dose which makes a thing a poison and hence he stressed the importance of dose relative to toxic reactions 2 Most of the early controls concentrated on substances that were to be deliberately administered to the human subject in the form of medicines Legislation for many centuries was mainly concerned with regulating the activities of apothecaries and physicians The Royal College of Physicians for example was originally established to control the activities of physicians within London Among the controls which it exerted was that over the use of medicinal substances Such controls were however poor based as they were on hearsay evidence of toxicity For many centuries no means existed for the accurate determination of toxicity

Decision Support Systems Engineering Andrew P. Sage,1991 Provides a comprehensive discussion of the design and use of decision support systems It describes the generic technological components of such systems emphasizing system requirements analysis and specification the use of alternative analytical methods and how systems can be evaluated It then discusses the formulation of user needs their translation into system requirements the hardware and software allocation of these requirements and the development of suitable hardware and software architectures
