

The background of the cover is a high-magnification micrograph of neural tissue. It features a dense network of neurons and axons, with various components highlighted by bright, multi-colored fluorescent dyes in shades of red, green, blue, and yellow. The overall texture is complex and organic, typical of biological specimens under a microscope.

The Singularity Is Nearer Ray Kurzweil, 2024-06-25 AN INSTANT NEW YORK TIMES BESTSELLER ONE OF TIME S 100 MOST INFLUENTIAL PEOPLE IN ARTIFICIAL INTELLIGENCE The noted inventor and futurist s successor to his landmark book The Singularity Is Near explores how technology will transform the human race in the decades to come Since it was first published in 2005 Ray Kurzweil s The Singularity Is Near and its vision of an exponential future have spawned a worldwide movement Kurzweil s predictions about technological advancements have largely come true with concepts like AI intelligent machines and biotechnology now widely familiar to the public In this entirely new book Ray Kurzweil brings a fresh perspective to advances toward the Singularity assessing his 1999 prediction that AI will reach human level intelligence by 2029 and examining the exponential growth of technology that in the near future will expand human intelligence a millionfold and change human life forever Among the topics he discusses are rebuilding the world atom by atom with devices like nanobots radical life extension beyond the current age limit of 120 reinventing intelligence by

connecting our brains to the cloud how exponential technologies are propelling innovation forward in all industries and improving all aspects of our well being such as declining poverty and violence and the growth of renewable energy and 3 D printing He also considers the potential perils of biotechnology nanotechnology and artificial intelligence including such topics of current controversy as how AI will impact employment and the safety of autonomous cars and After Life technology which aims to virtually revive deceased individuals through a combination of their data and DNA The culmination of six decades of research on artificial intelligence The Singularity Is Nearer is Ray Kurzweil s crowning contribution to the story of this science and the revolution that is to come Mechanistic Criminology K. Ryan Proctor, Richard E. Niemeyer, 2019-05-23 The science of criminology is at a crossroads Despite accumulating a dizzying array of facts about crime the field has yet to identify a body of theories that allows for the adequate prediction explanation and control of phenomena of central interest to criminologists Mechanistic Criminology locates this problem within the field s failure to conform to the expectations of scientific fields and reliance on antiquated methods of theory construction The authors contend that this failure has resulted in an inability of criminologists to engage in theory falsification and competition two central activities of science that produce the forms of reliable knowledge that are unique to scientific fields Mechanistic Criminology advocates for the adoption of a mechanistic mode of theorizing to allow criminologists to engage in theory falsification and competition and ignite rapid scientific discovery in the field The proposed method is the same one employed within the biological sciences which is responsible for their rapid scientific progress in the late twentieth and early twenty first centuries Should criminologists adopt this mechanistic approach criminology could experience the same scientific revolution that is occurring in the biological sciences and criminologists would generate the knowledge necessary for the prediction explanation and control of crime *An Introduction to Applied Behavioral Neuroscience* Laura A.
