First Stage Lisa Processing Gravitational Analysis:

First-stage LISA Data Processing and Gravitational Wave Data Analysis Yan Wang, 2015-12-10 This thesis covers a diverse set of topics related to space based gravitational wave detectors such as the Laser Interferometer Space Antenna LISA The core of the thesis is devoted to the preprocessing of the interferometric link data for a LISA constellation specifically developing optimal Kalman filters to reduce arm length noise due to clock noise The approach is to apply Kalman filters of increasing complexity to make optimal estimates of relevant quantities such as constellation arm length relative clock drift and Doppler frequencies based on the available measurement data Depending on the complexity of the filter and the simulated data these Kalman filter estimates can provide up to a few orders of magnitude improvement over simpler estimators While the basic concept of the LISA measurement Time Delay Interferometry was worked out some time ago this work brings a level of rigor to the processing of the constellation level data products The thesis concludes with some topics related to the eLISA such as a new class of phenomenological waveforms for extreme mass ratio inspiral sources EMRIs one of the main source for eLISA an octahedral space based GW detector that does not require drag free test masses and some efficient template search algorithms for the case of relatively high SNR signals

Laser Interferometer Space Antenna Stephen M. Merkowitz, Jeffrey C. Livas, 2006-12-07 LISA Laser Interferometer Space Antenna is a joint NASA ESA mission to detect and observe gravitational waves in space Topics discussed in this sixth symposium include fundamental gravitational physics and astrophysics of LISA gravitational data analysis LISA instrumentation LISA Pathfinder and ground based gravitational wave antennas
