Reading and Writing the Electronic Book Catherine C. Marshall,2010 Developments over the last 20 years have
fueled considerable speculation about the future of the book and of reading itself This book begins with a gloss over the
history of electronic books including the social and technical forces that have shaped their development The focus then shifts
to reading and how we interact with what we read basic issues such as legibility annotation and navigation are examined as
aspects of reading that eBooks inherit from their print legacy Because reading is fundamentally communicative I also take a
closer look at the sociality of reading how we read in a group and how we share what we read Studies of reading and eBook
use are integrated throughout the book but Chapter 5 goes meta to explore how a researcher might go about designing his or
her own reading related studies No book about eBooks is complete without an explicit discussion of content preparation i e
how the electronic book is written Hence Chapter 6 delves into the underlying representation of eBooks and efforts to create
and apply markup standards to them This chapter also examines how print genres have made the journey to digital and how

some emerging digital genres might be realized as eBooks Finally Chapter 7 discusses some beyond the book functionality how can eBook platforms be transformed into portable personal libraries In the end my hope is that by the time the reader reaches the end of this book he or she will feel equipped to perform the next set of studies write the next set of articles invent new eBook functionality or simply engage in a heated argument with the stranger in seat 17C about the future of reading
