**From Food Quality Control System** Jiehong Zhou, Shaosheng Jin, 2013-03-25 In recent years China has taken a number of effective measures to strengthen the supervision of food quality and safety but food safety incidents still occur sometimes. The recurrence and intractability of such incidents suggest that in addition to the imperfect supervision system the greatest obstacle to China's food quality safety management is that China's farm to fork food supply chain has too many stages; the members on the supply chain have not formed a stable strategic and cooperative relation and on the other hand during the transitional period some practitioners lack social responsibility. Therefore China's food quality safety management and the establishment of food quality and safety traceability system should follow the development trend of international food quality and safety supervision and should combine with the establishment of China's agricultural industrialization and standardization, integrate China's existing but isolated effective measures such as the establishment of bases for the implementation of the system of claiming certificates or invoices for the performance of Management Regulations for Pig Slaughtering and Quarantine Inspection in Designated Places and for the conduct of World Expo as well as the establishment of market access system, take into consideration the demand, the dynamic mechanism and the performance of important measures of food supply chain members for food quality and safety control as well as the difficulties and the deep-seated reasons in the implementation process of such measures. To this end this book chooses important agricultural products of vegetables, pork and aquatic products as the subjects investigated. From an integrated vertical perspective of the supply chain and according to the degree of industrialization of different products focusing on the key links of quality and safety control of vegetables, pork and aquatic products this book carries out empirical analysis of the construction of food quality and safety control system such as HACCP, Hazard Analysis Critical Control Point, quality control system and food quality and safety traceability system, deeply analyzes and straightens out the dynamic mechanism and the performance of different business entities implementing the food quality and safety management system as well as the bottleneck and deep-seated causes of promoting advanced experience of pilot areas and enterprises in China and put forward ideas and suggestions of establishing long-term effective food quality and safety management system with regard to vegetables, pork and aquatic products which can provide scientific basis for the government to design food quality and safety management policies.
