Food and Drink - Good Manufacturing Practice Institute of Food Science and Technology, Louise Manning, 2012-11-26

Good Manufacturing Practice GMP refers to advice and guidance put in place to outline the aspects of production and testing that can impact the quality and safety of a product In the case of food and drink GMP is aimed at ensuring that products are safe for the consumer and are consistently manufactured to a quality appropriate to their intended use Manufacturers have for several years been driving towards such goals as Total Quality Management TQM lean manufacturing and sustainability GMP is bound up with these issues The ever increasing interest amongst consumers retailers and enforcement authorities in the conditions and practices in food manufacture and distribution increases the need for the food manufacturer to operate within clearly defined policies such as those laid down in GMP The ability to demonstrate that Good Manufacturing Practice has been fully and effectively implemented could in the event of a consumer complaint or a legal action reduce the manufacturer s liability and protect them from prosecution First launched in 1986

IFST's Good Manufacturing Practice Guide has been widely recognized as an indispensable reference work for food scientists and technologists. It sets out to ensure that food manufacturing processes deliver products that are uniform in quality, free from defects and contamination, and as safe as it is humanly possible to make them. This 6th edition has been completely revised and updated to include all the latest standards and guidance, especially with regard to legislation-driven areas such as HACCP. The Guide is a must-have for anyone in a managerial or technical capacity concerned with the manufacture, storage, and distribution of food and drink. It is also a valuable reference for food education, training, and for those involved in food safety and enforcement. Food scientists in academic and industry environments will value its precision, and policy makers and regulatory organizations will find it an indispensable guide to an important and multifaceted area.

About IFST: IFST is the leading independent qualifying body for food professionals in Europe and the only professional body in the UK concerned with all aspects of food science and technology. IFST members are drawn from all over the world and from all ages and backgrounds, including industry, manufacturing, retailing, and food service, universities and schools, government, research, and development, quality assurance, and food law enforcement. Outbreak Timothy D. Lytton, 2019-04-16. Foodborne illness is a big problem. Wash those chicken breasts and you're likely to spread *Salmonella* to your countertops, kitchen towels, and other foods nearby. Even salad greens can become biohazards when toxic strains of *E. coli* inhabit the water used to irrigate crops. All told, contaminated food causes 48 million illnesses, 128,000 hospitalizations, and 3,000 deaths each year in the United States. With *Outbreak*, Timothy D. Lytton provides an up-to-date history and analysis of the US food safety system. He pays particular attention to important but frequently overlooked elements of the system, including private audits and liability insurance. Lytton chronicles efforts dating back to the 1800s to combat widespread contamination by pathogens such as *E. coli* and *salmonella* that have become frighteningly familiar to consumers. Over time, deadly foodborne illness outbreaks caused by infected milk, poison hamburgers, and tainted spinach have spurred steady scientific and technological advances in food safety. Nevertheless, problems persist. Inadequate agency budgets restrict the reach of government regulation. Pressure from consumers to keep prices down constrains industry investments in safety. The limits of scientific knowledge leave experts unable to assess policies' effectiveness, and whether measures designed to reduce contamination have actually improved public health. *Outbreak* offers practical reforms that will strengthen the food safety system's capacity to learn from its mistakes and identify cost-effective food safety efforts capable of producing measurable public health benefits.
