Fools Rule Inside The Failed Politics Of Climate Change:

Fools Rule William Marsden, 2011-10-25 This eloquent rage inciting polemic about the global failure to deal with climate change will appeal to readers of Tim Flannery George Monbiot and Bill McKibben and anyone concerned with the economic and environmental future of our planet Kyoto 1997 Montreal 2005 Copenhagen 2009 Cancun 2010 In *Fools Rule* Marsden illustrates how inefficient and short sighted political negotiations have become despite mounting scientific evidence that immediate action is essential to curb the effects of climate change International climate change summits are now widely monitored events attended by state leaders and crowded with journalists yet somehow they have never been less productive Treaties and action plans are smothered by economic self interest diplomatic errors and every nation s hungry scramble for its share of the remaining atmospheric space Marsden takes us from inside the bungled negotiations at Copenhagen to the melting glaciers and untapped oil reserves of the Arctic he shows us the paralyzing effect oil and gas companies have on green legal initiatives in the United States and therefore on any international climate change treaty and with wit and penetrating insight he asks the toughest question will we be able to change before it s too late **What's Wrong with**

Climate Politics and How to Fix It Paul G. Harris, 2013-07-11 Governments have failed to stem global emissions of carbon dioxide and other greenhouse gases causing climate change Indeed climate changing pollution is increasing globally and will do so for decades to come without far more aggressive action What explains this failure to effectively tackle one of the world s most serious problems And what can we do about it To answer these questions Paul G Harris looks at climate politics as a doctor might look at a very sick patient He performs urgent diagnoses and prescribes vital treatments to revive our ailing planet before it s too late The book begins by diagnosing what s most wrong with climate politics including the anachronistic international system which encourages nations to fight for their narrowly perceived interests and makes major cuts in greenhouse pollution extraordinarily difficult the deadlock between the United States and China which together produce over one third of global greenhouse gas pollution but do little more than demand that the other act first and affluent lifestyles and overconsumption which are spreading rapidly from industrialized nations to the developing world The book then prescribes several remedies for the failed politics of climate change including a new kind of climate diplomacy with people at its center national policies that put the common but differentiated responsibilities of individuals alongside those of nations and a campaign for simultaneously enhancing human wellbeing and environmental sustainability While these treatments are aspirational they are not intended to be utopian As Harris shows they are genuine workable solutions to what ails the politics of climate change today *Unprecedented* David Ray Griffin, 2015-01-04 This book combines 1 the most extensive treatment of the causes and phenomena of climate change in combination with 2 an extensive treatment of social obstacles and challenges fossil fuel funded denialism media failure political failure and moral religious and economic challenges 3 the most extensive treatment of the needed transition from fossil fuel energy to clean energy and 4 the most extensive treatment of

mobilization It provides the most complete most up to date treatment of the various kinds of clean energy and how they could combine to provide 70% clean energy by 2035 and 100% before 2050 both U S and worldwide *The Canadian*

Gunter finds inspiring initiatives to mitigate and adapt to these threats including wind turbines in a tiny Texas town green building construction in Kansas and walkable urbanism in Portland Oregon These projects are already making a difference and they underscore the importance of local action Drawing on interviews with government officials industry leaders and alternative energy activists Climate Travels emphasizes direct personal experience and the centrality of environmental justice Showing how travel can help bring the reality of climate change home it offers readers a hopeful message about how to take action on the local level themselves

The Risk Pivot Bruce D. Jones, David Steven, 2014-11-21 The last decade has seen a revolution in global energy First we saw explosive growth in demand from Asia's rising powers which fueled fears about scarcity and conflict But we've also seen an American revolution in technology and markets resulting in a dramatic increase in supply This is strengthening America's hand in the world but it's not without complications There are major security consequences of these shifts Among the most consequential are China and India Asia's emerging giants which are increasingly exposed to political risks associated with energy risks as well as the energy flows pivoting to Asia Meanwhile the great powers struggle to balance their need for fossil fuels with a mounting effort to tackle climate change The top powers and the United States above all face a strategic choice whether to use energy as a weapon of geopolitics or as a tool of a stable order

The Climate Change Challenge and the Failure of Democracy David Shearman, Joseph Wayne Smith, 2007-08-30 This provocative book presents compelling evidence that the fundamental problem behind environmental destruction and climate change in particular is the operation of liberal democracy Climate change threatens the future of civilization but humanity is impotent in effecting solutions Even in those nations with a commitment to reduce greenhouse emissions they continue to rise This failure mirrors those in many other spheres that deplete the fish of the sea erode fertile land destroy native forests pollute rivers and streams and utilize the world's natural resources beyond their replacement rate In this provocative book Shearman and Smith present evidence that the fundamental problem causing environmental destruction and climate change in particular is the operation of liberal democracy Its flaws and contradictions bestow upon government and its institutions laws and the markets and corporations that provide its sustenance an inability to make decisions that could provide a sustainable society Having argued that democracy has failed humanity the authors go even further and demonstrate that this failure can easily lead to authoritarianism without our even noticing Even more provocatively they assert that there is merit in preparing for this eventuality if we want to survive climate change They are not suggesting that existing authoritarian regimes are more

successful in mitigating greenhouse emissions for to be successful economically they have adopted the market system with alacrity Nevertheless the authors conclude that an authoritarian form of government is necessary but this will be governance by experts and not by those who seek power There are in existence highly successful authoritarian structures for example in medicine and in corporate empires that are capable of implementing urgent decisions impossible under liberal democracy Society is verging on a philosophical choice between liberty or life But there is a third way between democracy and authoritarianism that the authors leave for the final chapter Having brought the reader to the realization that in order to halt or even slow the disastrous process of climate change we must choose between liberal democracy and a form of authoritarian government by experts the authors offer up a radical reform of democracy that would entail the painful choice of curtailing our worldwide reliance on growth economies along with various legal and fiscal reforms Unpalatable as this choice may be they argue for the adoption of this fundamental reform of democracy over the journey to authoritarianism *Civil Rights*
