JACOBSON, 2000 **Biogeochemistry of a Forested Ecosystem** Gene E. Likens, 2013-08-13 The goal of this Third Edition

is to update long term data presented in earlier editions and to generate new syntheses and conclusions about the biogeochemistry of the Hubbard Brook Valley based on these longer term data There have been many changes revelations and exciting new insights generated from the longer data records For example the impact of acid rain peaked during the period of the HBES and is now declining The longer term data also posed challenges in that very marked changes in fluxes occurred in some components such as hydrogen ion and sulfate deposition calcium and nitrate export in stream water and biomass accumulation during the almost 50 years of record Thus presenting mean or average conditions for many components for such a long period when change was so prominent do not make sense In some cases pentads or decades of time are compared to show these changes in a more smoothed and rational way for this long period In some cases a single period often during periods of rapid change such as acidification is used to illustrate the main point s And for some elements a unique mass balance approach allowing the calculation of the Net Ecosystem Flux NEF is shown on an annual basis throughout the study

Interactions of C, N, P, and S Biogeochemical Cycles and Global Change R. Wollast, Fred T. Mackenzie, Lei Chou, 1993 This book is a natural extension of the SCOPE Scientific Committee of Problems on the Environment volumes on

the carbon C nitrogen N phosphorus P and sulfur S biogeochemical cycles and their interactions Likens 1981 Bolin and Cook 1983 Substantial progress in the knowledge of these cycles has been made since publication of those volumes In particular the nature and extent of biological and inorganic interactions between these cycles have been identified positive and negative feedbacks recognized and the relationship between the cycles and global environmental change preliminarily elucidated In March 1991 a NATO Advanced Research Workshop was held for one week in Melreux Belgium to reexamine the biogeochemical cycles of C N P and S on a variety of time and space scales from a holistic point of view This book is the result of that workshop The biogeochemical cycles of C N P and S are intimately tied to each other through biological productivity and subsequently to problems of global environmental change These problems may be the most challenging facing humanity in the 21 st century In the broadest sense global change encompasses both changes to the status of the large globally connected atmospheric oceanic and terrestrial environments e g tropospheric temperature increase and change occurring as the result of nearly simultaneous local changes in many regions of the world e g eutrophication

Biogeochemical Cycles and Climate Han Dolman, 2019-05-02 Changing concentrations of greenhouse gases are key to our changing climate. Biogeochemical Cycles and Climate examines the interaction of the main biogeochemical cycles of the earth with the physics of climate from the perspective of the earth as an integrated system. Biogeochemical cycles play a fundamental role in the Earth's system; they describe the movement of matter and transfer of energy around the planet. This text aims to answer some fundamental questions: How have the cycles of key nutrients such as carbon, nitrogen, phosphorus, and water changed both in the geological past and more recently through the impact of humans on the Earth System? How do these cycles interact with each other and affect the physical properties of climate? How can we use this knowledge to mitigate some of the impacts of changing biogeochemistry on climate and the Earth's habitability and resilience? Understanding the complex interactions of biogeochemistry with the Earth's climate is crucial for understanding past and current changes in climate and, above all, for the future sustainable management of our planet. Global biogeochemical cycles

Butcher, 1992-08-12 Global biogeochemical cycles *Biogeochemistry of Global Change* Ronald S. Oremland, 2012-12-06 Certain trace gases in the atmosphere are able to absorb electromagnetic energy from the reflection of solar radiation from the Earth's surface. These gases have been increasing steadily, and there is concern that they will change global climatic conditions by warming the atmosphere, the so-called greenhouse effect. Many of these gases originate from biological systems. The Biogeochemistry of Global Change discusses the role of radiative trace gases in this process. The disciplines covered in the book include microbiology, geochemistry, atmospheric chemistry, plant physiology, oceanography, and limnology and soil science. This diversity allows for cross-fertilization, achieving a better understanding of the complex mechanisms for biological and chemical formation, the destruction of trace gases, and the manipulation of ecosystems. Some of the topics covered include biological mechanisms of formation and destruction of various greenhouse gases such as methane, nitrous oxide, carbon dioxide, dimethylsulfide, and chlorofluorocarbons; the outward and consumptive flux of trace gases from marine and terrestrial systems, including anthropogenic sources; global trace gas modeling studies; the atmospheric physical and chemical reactions of trace gases; and the environmental significance of various trace gases in ancient and current atmospheres. The Biogeochemistry of Global Change provides both reviews and primary source material for active researchers in this field and for microbiologists and atmospheric chemists.
