Applied Digital Logic Exercises Using FPGAs Kurt Wick, 2017-10-03 FPGAs have almost entirely replaced the traditional Application Specific Standard Parts ASSP such as the 74xx logic chip families because of their superior size versatility and speed For example FPGAs provide over a million fold increase in gates compared to ASSP parts The traditional approach for hands on exercises has relied on ASSP parts primarily because of their simplicity and ease of use for the novice Not only is this approach technically outdated but it also severely limits the complexity of the designs that can be implemented By introducing the readers to FPGAs they are being familiarized with current digital technology and the skills to implement complex sophisticated designs However working with FPGAs comes at a cost of increased complexity notably the mastering of an HDL language such as Verilog Therefore this book accomplishes the following first it teaches basic digital design concepts and then applies them through exercises second it implements these digital designs by teaching the user the syntax of the Verilog language while implementing the exercises Finally it employs contemporary digital hardware such as the FPGA to build a simple calculator a basic music player a frequency and period counter and it ends with a microprocessor being embedded in the fabric of the FPGA to communicate with the PC In the process readers learn about digital mathematics and digital to analog converter concepts through pulse width modulation *Looking out the Window* Bob Webster, 2022-01-25

Kinematic Labs with Mobile Devices Jason M. Kinser, 2015-07-01 As technology advances education has expanded from the classroom into other formats including online delivery flipped classrooms and hybrid delivery Congruent with these is the need for alternative formats for laboratory experiences This explosion in technology has also placed in the hands of a majority of students a sensor suite tucked neatly into their smartphones or smart tablets The popularity of these devices provides a new avenue for the non traditional kinematic lab experience This book addresses this issue by providing 13 labs spanning the common topics in the first semester of university level physics Each lab is designed to use only the student's smartphone laptop and items easily found in big box stores or a hobby shop Each lab contains theory set up instructions and basic analysis techniques All of these labs can be performed outside of the traditional university lab setting and initial costs averaging less than 8 per student per lab excluding the smartphone and laptop
