## **Experimental Methods For The Analysis Of Optimization Algorithms:**

**Experimental Methods for the Analysis of Optimization Algorithms** Thomas Bartz-Beielstein,Marco Chiarandini,Luís Paquete,Mike Preuss,2010-11-02 In operations research and computer science it is common practice to evaluate the performance of optimization algorithms on the basis of computational results and the experimental approach should follow accepted principles that guarantee the reliability and reproducibility of results However computational experiments differ from those in other sciences and the last decade has seen considerable methodological research devoted to understanding the particular features of such experiments and assessing the related statistical methods This book consists of methodological contributions on different scenarios of experimental analysis The first part overviews the main issues in the experimental analysis of algorithms and discusses the experimental cycle of algorithm development the second part treats the characterization by means of statistical distributions of algorithm performance in terms of solution quality runtime and other measures and the third part collects advanced methods from experimental design for configuring and tuning algorithms on a specific class of instances with the goal of using the least amount of experimentation The contributor list includes leading scientists in algorithm design statistical design optimization and heuristics and most chapters provide theoretical background and are enriched with case studies This book is written for researchers and practitioners in operations research and computer science who wish to improve the experimental assessment of optimization algorithms and consequently their design     Applied Mechanics Reviews ,1978     **A Collection of Technical Papers** ,2001     **ASME Technical Papers** ,     Aerospace America ,2006     **Cornell University Courses of Study** Cornell University,2007     ACM SIGPLAN Notices ,2001-04     *Eighth International Symposium on Laser Metrology* R. Experimentation is necessary a purely theoretical approach is not reasonable The new experimentalism a development in the modern philosophy of science considers that an experiment can have a life of its own It provides a statistical methodology to learn from experiments where the experimenter should distinguish between statistical significance and scientific meaning This book introduces the new experimentalism in evolutionary computation providing tools to understand algorithms and programs and their interaction with optimization problems The book develops and applies statistical techniques to analyze and compare modern search heuristics such as evolutionary algorithms and particle swarm optimization Treating optimization runs as experiments the author offers methods for solving complex real world problems that involve optimization via simulation and he describes successful applications in engineering and industrial control projects The book bridges the gap between theory and experiment by providing a self contained experimental methodology and many examples so it is suitable for practitioners and researchers and also for lecturers and students It summarizes results from the author s consulting to industry and his experience teaching university courses and conducting tutorials at international conferences The book will be supported online with downloads and exercises Aeronautical Engineering ,1981 A selection of annotated
