Fontijn, 2017-05-04 The book brings together for the first time all aspects of reactions of metallic species in the gas phase and gives an up to date overview of the field Reactions covered include those of atomic other free radical and transient neutral species as well as ions Experimental and theoretical work is reviewed and the efforts to establish a closer link between these approaches are

discussed The field is mainly approached from a fundamental point of view but the applied problems which have helped stimulate the interest are pointed out and form the major subject of the final chapters These emphasize the competition between purely gas phase and gas surface reactions
