Mathematical Modelling of Gas-Phase Complex Reaction Systems: Pyrolysis and Combustion, 2019-06-06 Mathematical Modelling of Gas Phase Complex Reaction Systems Pyrolysis and Combustion Volume 45 gives an overview of the different steps involved in the development and application of detailed kinetic mechanisms mainly relating to pyrolysis and combustion processes The book is divided into two parts that cover the chemistry and kinetic models and then the numerical and statistical methods It offers a comprehensive coverage of the theory and tools needed along with the steps necessary for practical and industrial applications Details thermochemical properties and ab initio calculations of elementary reaction rates Details kinetic mechanisms of pyrolysis and combustion processes Explains experimental data for improving reaction models and for kinetic mechanisms assessment Describes surrogate fuels and molecular reconstruction of hydrocarbon liquid mixtures Describes pollutant formation in combustion systems Solves and validates the kinetic mechanisms using numerical and statistical methods Outlines optimal design of industrial burners and optimization and dynamic control of pyrolysis furnaces Outlines large eddy simulation of turbulent reacting flows Pharmaceutical Organic Chemistry I - (Theory) Mr. Rohit Manglik, 2024-07-24 In this book we will study about pharmaceutical organic chemistry i theory to understand its practical applications and theoretical foundations in the field of pharmacy and healthcare Frontier Orbitals And Reaction Paths: Selected Papers Of Kenichi Fukui Hiroshi Fujimoto, Kenich Fukui, 1997-11-26 This book is a collection of selected papers on the Frontier Orbital Theory by Nobel prizewinner Kenichi Fukui Chemistry 1981 with introductory notes It provides the basic concept and formulation of the theory and the physical and chemical significance of the frontier orbital interactions in chemistry together with many practical applications The formulation of the Intrinsic Reaction Coordinate and applications to some simple systems are also presented The aim of this volume is to show by what forces chemical reactions are driven and to demonstrate how the regio and stereo selectivities are determined in chemical reactions Students and senior investigators will gain insight into the nature of chemical reactions and find out how quantum chemical calculations are connected with chemical intuition *Organic Synthesis Via Examination Of Selected Natural Products* David J Hart, 2011-02-21 This book is written for advanced graduate and undergraduate students to expose them to a variety of strategies for the synthesis of organic compounds This is done largely within the context of natural products synthesis but some unnatural products synthesis is also included Multiple approaches to each group of synthesis targets are presented and the approaches are compared with one another with an eye on similarities and differences General problems in organic synthesis for example strategies for the preparation of 6 membered rings and 5 membered rings the importance of oxidation state the problem of acyclic diastereoselectivity the problem of controlling absolute stereochemistry the importance of functional group relationships are introduced early in the book and revisited throughout the text within the context of a variety of structurally unrelated natural products The book provides readers with a somewhat historical overview of organic

and natural products chemistry and spans synthetic methodology that dates from the 1940 s to the present time It is written in a style that readers will find entertaining at times It also contains lots of useful references with complete titles provided
