Gentzens Centenary Consistency Reinhard Kahle:

The Legacy of Kurt Schütte Reinhard Kahle, Michael Rathjen, 2020-08-10 This book on proof theory centers around the legacy of Kurt Schütte and its current impact on the subject Schütte was the last doctoral student of David Hilbert who was the first to see that proofs can be viewed as structured mathematical objects amenable to investigation by mathematical methods metamathematics Schütte inaugurated the important paradigm shift from finite proofs to infinite proofs and developed the mathematical tools for their analysis Infinitary proof theory flourished in his hands in the 1960s culminating in the famous bound $\aleph_1$ for the limit of predicative mathematics a fame shared with Feferman Later his interests shifted to developing infinite proof calculi for impredicative theories Schütte had a keen interest in advancing ordinal analysis to ever stronger theories and was still working on some of the strongest systems in his eighties The articles in this volume from leading experts close to his research show the enduring influence of his work in modern proof theory They range from eye witness accounts of his scientific life to developments at the current research frontier including papers by Schütte himself that have never been published before *Paul Lorenzen -- Mathematician and Logician* Gerhard Heinzmann, Gereon Wolters, 2021-08-17 This open access book examines the many contributions of Paul Lorenzen an outstanding philosopher from the latter half of the 20th century It features papers focused on integrating Lorenzen's original approach into the history of logic and mathematics The papers also explore how practitioners can implement Lorenzen's systematical ideas in today's debates on proof theoretic semantics databank management and stochastics Coverage details key contributions of Lorenzen to constructive mathematics Lorenzen's work on lattice groups and divisibility theory and modern set theory and Lorenzen's critique of actual infinity The contributors also look at the main problem of Grundlagenforschung and Lorenzen's consistency proof and Hilbert's larger program In addition the papers offer a constructive examination of a Russell style Ramified Type Theory and a way out of the circularity puzzle within the operative justification of logic and mathematics Paul Lorenzen's name is associated with the Erlangen School of Methodical Constructivism of which the approach in linguistic philosophy and philosophy of science determined philosophical discussions especially in Germany in the 1960s and 1970s This volume features 10 papers from a meeting that took place at the University of Konstanz

Concepts of Proof in Mathematics, Philosophy, and Computer Science Dieter Probst, Peter Schuster, 2016-07-25 A proof is a successful demonstration that a conclusion necessarily follows by logical reasoning from axioms which are considered evident for the given context and agreed upon by the community It is this concept that sets mathematics apart from other disciplines and distinguishes it as the prototype of a deductive science Proofs thus are utterly relevant for research teaching and communication in mathematics and of particular interest for the philosophy of mathematics In computer science moreover proofs have proved to be a rich source for already certified algorithms This book provides the reader with a collection of articles covering relevant current research topics circled around the concept proof It tries to give due consideration to the

depth and breadth of the subject by discussing its philosophical and methodological aspects addressing foundational issues induced by Hilbert's Programme and the benefits of the arising formal notions of proof without neglecting reasoning in natural language proofs and applications in computer science such as program extraction

Gentzen's Centenary

Reinhard Kahle, Michael Rathjen, 2015-11-02 Gerhard Gentzen has been described as logic's lost genius whom Gödel called a better logician than himself. This work comprises articles by leading proof theorists attesting to Gentzen's enduring legacy to mathematical logic and beyond. The contributions range from philosophical reflections and re-evaluations of Gentzen's original consistency proofs to the most recent developments in proof theory. Gentzen founded modern proof theory. His sequent calculus and natural deduction system beautifully explain the deep symmetries of logic. They underlie modern developments in computer science such as automated theorem proving and type theory.

Advances in Proof-Theoretic

Semantics Thomas Piecha, Peter Schroeder-Heister, 2015-10-24 This volume is the first ever collection devoted to the field of proof-theoretic semantics. Contributions address topics including the systematics of introduction and elimination rules and proofs of normalization, the categorial characterization of deductions, the relation between Heyting's and Gentzen's approaches to meaning, knowability paradoxes, proof-theoretic foundations of set theory, Dummett's justification of logical laws, Kreisel's theory of constructions, paradoxical reasoning and the defence of model theory. The field of proof-theoretic semantics has existed for almost 50 years, but the term itself was proposed by Schroeder-Heister in the 1980s. Proof-theoretic semantics explains the meaning of linguistic expressions in general and of logical constants in particular in terms of the notion of proof. This volume emerges from presentations at the Second International Conference on Proof-Theoretic Semantics in Tbingen in 2013, where contributing authors were asked to provide a self-contained description and analysis of a significant research question in this area. The contributions are representative of the field and should be of interest to logicians, philosophers and mathematicians alike.

From a Flexible Type System to Metapredicative Wellordering

Proofs Florian Ranzi, 2015-10-21 Inaugural dissertation an der Philosophisch-naturwissenschaftlichen Fakultät der Universität Bern.

Mario Bunge: A Centenary Festschrift Michael R. Matthews, 2019-07-17 This volume has 41 chapters written to honor the 100th birthday of Mario Bunge. It celebrates the work of this influential Argentine-Canadian physicist and philosopher. Contributions show the value of Bunge's science-informed philosophy and his systematic approach to philosophical problems. The chapters explore the exceptionally wide spectrum of Bunge's contributions to metaphysics, methodology and philosophy of science, philosophy of mathematics, philosophy of physics, philosophy of psychology, philosophy of social science, philosophy of biology, philosophy of technology, moral philosophy, social and political philosophy, medical philosophy and education. The contributors include scholars from 16 countries. Bunge combines ontological realism with epistemological fallibilism. He believes that science provides the best and most warranted knowledge of the natural and social world and that such knowledge is the only sound basis for moral decision-making and social and political reform. Bunge

argues for the unity of knowledge In his eyes science and philosophy constitute a fruitful and necessary partnership Readers will discover the wisdom of this approach and will gain insight into the utility of cross disciplinary scholarship This anthology will appeal to researchers students and teachers in philosophy of science social science and liberal education programmes 1 Introduction Section I An Academic Vocation 3 chapters Section II Philosophy 12 chapters Section III Physics and Philosophy of Physics 4 chapters Section IV Cognitive Science and Philosophy of Mind 2 chapters Section V Sociology and Social Theory 4 chapters Section VI Ethics and Political Philosophy 3 chapters Section VII Biology and Philosophy of Biology 3 chapters Section VIII Mathematics 3 chapters Section IX Education 2 chapters Section X Varia 3 chapters Section XI Bibliography
