Transforming African Food Systems Claire Helen Quinn, Andrew John Dougill, Julian Douglas May, 2025-10-24 Overcoming Africa's development challenges cannot be uncoupled from the need to transform the continent's food systems One in four people in sub-Saharan Africa faces food insecurity and Africa will need to produce 80% more food by 2050 The challenge is complicated by the interrelationship between agriculture and environmental sustainability In addition agriculture also remains one of the most effective pathways out of poverty on the continent As agriculture both contributes to and is affected

by climate change there is a pressing need for innovation in climate smart agriculture that considers the environment as integral to the food system. However, access to nutritious safe food and improved livelihoods does not solely depend on boosting agricultural productivity. Food systems encompass the activities and actors involved in all aspects of the food supply chain from production through to consumption and disposal of food. A food systems research approach recognises the importance of interactions and relationships between activities, actors, and thus the importance of interdisciplinary approaches for achieving transformative change. The concerted and coordinated actions of the food industry, agriculture production and processing, retail food service sector, and waste disposal and consumers are crucial to promote sustainable consumption and production with a focus on reducing all forms of food losses throughout the entire supply chain. Food systems transformation needs to focus not just on increasing production but on access to food and markets, nutrition, diversity and security, climate resilience, and adaptation of both agro-ecological systems and the food system more broadly. This Research Topic focuses specifically on transformation of African food systems. While comprising many similar activities, actors, to other food systems, African food systems also have activities, actors, and conditions that are specific to the African context. These contextual factors include a shared history of colonisation that creates specific historical, demographic, political and socio-cultural drivers of change, value chains that are often short and reliant on informal exchange, and small-scale operations, distinct territorial imbalances that create significant inequalities, and normative and cognitive institutions that create diverse cultural beliefs and values while influencing the roles of women and youth in food systems. We welcome submission of original research articles, case studies, systematic reviews, or meta-analysis that offer new insights and perspectives on African food systems transformation. This topic will bring together interdisciplinary research and practice and provide a platform for knowledge exchange, collaboration, and collective action for transforming African food systems so that they are equitable, resilient, and sustainable.
