Structure, physical, chemical properties and analytical method description of the location, biosynthesis of pigments and biochemical changes which occur during early fruit development, maturation and senescence and factors affecting these changes. Chlorophylls, Anthocyanins, Carotenoids. *Technical Book Review Index*, 1984 Mass Spectrometry Imaging in Food Analysis Leo M. L. Nollet, 2020.

Food contains various compounds and many technologies exist to analyze those molecules of interest. However, the analysis of the spatial distribution of those compounds using conventional technology such as liquid chromatography, mass spectrometry or gas chromatography, mass spectrometry is difficult. Mass spectrometry imaging (MSI) is a mass spectrometry technique to visualize the spatial distribution of molecules as biomarkers, metabolites, peptides or proteins by their molecular masses. Despite the fact that MSI has been generally considered a qualitative method, the signal generated by this technique is proportional to the relative abundance of the analyte and so quantification is possible.

Mass Spectrometry Imaging in Food Analysis a volume in the Food Analysis and Properties Series explains how the novel use of matrix-assisted laser desorption/ionization mass spectrometry imaging (MALDI MSI) will be an ideal complementary approach. MALDI MSI is a two-dimensional MALDI MS technology that can detect compounds in a tissue section without extraction, purification, separation or labeling. It can be used to visualize the spatial distribution of biomolecules in foods.

Features: Explains the novel use of matrix-assisted laser desorption/ionization mass spectrometry imaging in food analysis. Describes how MALDI MSI will be a useful technique for optical quality assurance. Shows how MALDI MSI detects food contaminants and residues. Covers the historical development of the technology. While there are a multitude of books on mass spectrometry, none focus on food applications and thus this book is ideally suited to food scientists, food industry personnel engaged in product development, research institutions and universities active in food analysis or chemical analysis.
