

A detailed close-up photograph of the intricate gears and mechanical components of a watch movement. The gears are made of polished metal, with some showing a golden hue and others a silvery blue. The image is filled with the complex interlocking of teeth and the smooth curves of the watch plates, creating a sense of precision and mechanical complexity.

Dynamic Economic Analysis Gerhard Sorger, 2015-02-12 Concise yet rigorous this textbook provides a clear and systematic introduction to the theory and application of dynamic economic models *Dynamic Economic Analysis* Gerhard Sorger, 2015

**Differential Games in Industrial Economics** Luca Lambertini, 2018-04-26 Game theory has revolutionised our understanding of industrial organisation and the traditional theory of the firm Despite these advances industrial economists have tended to rely on a restricted set of tools from game theory focusing on static and repeated games to analyse firm structure and behaviour Luca Lambertini a leading expert on the application of differential game theory to economics argues that many dynamic phenomena in industrial organisation such as monopoly oligopoly advertising R D races can be better understood and analysed through the use of differential games After illustrating the basic elements of the theory Lambertini guides the reader through the main models spanning from optimal control problems describing the behaviour of a monopolist through to oligopoly games in which firms strategies include prices quantities and investments This approach will be of great value to students and researchers in economics and those interested in advanced applications of game theory

**Automation and Its Macroeconomic Consequences** Klaus Prettnner, David E. Bloom, 2020-06-19 Automation and Its Macroeconomic Consequences reveals new ways to understand the economic characteristics of our increasing dependence on machines Illuminating technical and social elements it describes economic policies that could counteract negative income distribution consequences of automation without hampering the adoption of new technologies Arguing that modern automation cannot be compared to the Industrial Revolution it considers consequences of automation such as spatial patterns urbanization and regional concerns In touching upon labor growth demographic and policy Automation and its Macroeconomic Consequences stands at the intersection of technology and economics offering a comprehensive portrait illustrated by empirical observations and examples Introduces formal growth models that include automation and the empirical specifications on which the data driven results rely Focuses on formal modeling empirical analysis and derivation of evidence based policy conclusions Considers consequences of automation such as spatial patterns urbanization and regional concerns

**Economic Dynamics in Discrete Time** Jianjun Miao, 2014-09-12 A unified comprehensive and up to date introduction to the analytical and numerical tools for solving dynamic economic problems This book offers a unified comprehensive and up to date treatment of analytical and numerical tools for solving dynamic economic problems The focus is on introducing recursive methods an important part of every economist s set of tools and readers will learn to apply recursive methods to a variety of dynamic economic problems The book is notable for its combination of theoretical foundations and numerical methods Each topic is first described in theoretical terms with explicit definitions and rigorous proofs numerical methods and computer codes to implement these methods follow Drawing on the latest research the book covers such cutting edge topics as asset price bubbles recursive utility robust control policy analysis in dynamic

New Keynesian models with the zero lower bound on interest rates and Bayesian estimation of dynamic stochastic general equilibrium DSGE models The book first introduces the theory of dynamical systems and numerical methods for solving dynamical systems and then discusses the theory and applications of dynamic optimization The book goes on to treat equilibrium analysis covering a variety of core macroeconomic models and such additional topics as recursive utility increasingly used in finance and macroeconomics dynamic games and recursive contracts The book introduces Dynare a widely used software platform for handling a range of economic models readers will learn to use Dynare for numerically solving DSGE models and performing Bayesian estimation of DSGE models Mathematical appendixes present all the necessary mathematical concepts and results Matlab codes used to solve examples are indexed and downloadable from the book's website A solutions manual for students is available for sale from the MIT Press a downloadable instructor's manual is available to qualified instructors *Applied Computational Economics and Finance* Mario J. Miranda, Paul L.

Fackler, 2004-08-20 This book presents a variety of computational methods used to solve dynamic problems in economics and finance It emphasizes practical numerical methods rather than mathematical proofs and focuses on techniques that apply directly to economic analyses The examples are drawn from a wide range of subspecialties of economics and finance with particular emphasis on problems in agricultural and resource economics macroeconomics and finance The book also provides an extensive Web site library of computer utilities and demonstration programs The book is divided into two parts The first part develops basic numerical methods including linear and nonlinear equation methods complementarity methods finite dimensional optimization numerical integration and differentiation and function approximation The second part presents methods for solving dynamic stochastic models in economics and finance including dynamic programming rational expectations and arbitrage pricing models in discrete and continuous time The book uses MATLAB to illustrate the algorithms and includes a utilities toolbox to help readers develop their own computational economics applications Wspc

Optimal Control and System Theory in Dynamic Economic Analysis Masanao Aoki,1976 **Journal of Economic Dynamics & Control** ,1987 **Inversion Method in the Discrete-time Nonlinear Control Systems Synthesis Problems** Ülle Kotta,1995-06-02 The purpose of this book is twofold To survey control system design methods based on the system inversion technique and to collect into one place the many recent results in the field It has been known for some time that inverse systems may be used to solve numerous control problems Despite the importance and conceptual simplicity of this topic there appears to be no monograph written on it The purpose of this work is therefore to present and apply a systematic design method which bases itself on the fundamental system property of invertibility Many different theoretical and practical aspects are considered in this volume working from elementary topics in the first section to current research in the second Chaos Theory in Economics W. Davis Dechert,1996 This important book presents the most important articles by leading scholars in their fields which bring together three basic aspects of research into nonlinear dynamics and economics The first papers deal with the theoretical methods used in analysing chaotic dynamics and the statistical tools to detect the presence of non linearities in economic data The following articles discuss the models which are currently being used to stimulate nonlinear economic phenomena The final papers apply these methods to a number of economic time series The editor has written a new introduction to accompany the piece *IEICE Transactions on Communications, Electronics, Information, and Systems* ,1991-04 *Stochastic Equilibrium Problems in Economics and Game Theory* I. V. Evstigneev,2002 The Economics of Complex Spatial Systems P. Nijkamp,A. Reggiani,1998-05-05 This text argues that complexity theory offers new departures for spatial economic modelling It offers a broad overview of recent advances in non linear dynamics and illustrates the relevance of this paradigm on the basis of several illustrations in the area of space economy **Western Journal of Agricultural Economics** ,1981 **Stochastic Models of Control and Economic**

**Dynamics** Vadim Iosifovich Arkin, I. V. Evstigneev, 1987 This book is devoted to a specific problem in the general theory of automatic control sequential control under conditions of incomplete information The main results concern the case in which at each moment of continuous time only a finite number of controls are admissible and the results of control action are represented by realizations of random variables whose distributions at a given control correspond to one of several alternative hypotheses The analysis is conducted in a Bayesian framework
