Dynamics Of Advanced Materials And Smart Structures Solid Mechanics And Its Applications:

Dynamics of Advanced Materials and Smart Structures Kazumi Watanabe, Franz Ziegler, 2013-04-17 Two key words for mechanical engineering in the future are Micro and Intelligence It is well known that the leadership in the intelligence technology is a matter of vital importance for the future status of industrial society and thus national research projects for intelligent materials structures and machines have started not only in advanced countries but also in developing countries Materials and structures which have self sensing diagnosis and actuating systems are called intelligent or smart and are of growing research interest in the world In this situation the IUTAM symposium on Dynamics of Advanced Materials and Smart Structures was a timely one Smart materials and structures are those equipped with sensors and actuators to achieve their designed performance in a changing environment They have complex structural properties and mechanical responses Many engineering problems such as interface and edge phenomena mechanical and electro magnetic interaction coupling and sensing actuating and control techniques arise in the development of intelligent structures Due to the multi disciplinary nature of these problems all of the classical sciences and technologies such as applied mathematics material science solid and fluid mechanics control techniques and others must be assembled and used to solve them IUTAM well understands the importance of this emerging technology An IUTAM symposium on Smart Structures and Structronic Systems Chaired by U
