practical knowledge as it is externalized and codified in texts drawings and artifacts such as models Finally practical knowledge is also related to social structures which fundamentally determine its dissemination and evolution into new knowledge structures The social structures of professionals and institutions represent the critical means by which practical knowledge takes form These actors are the agents of codification and by means of selection appropriation investment and knowledge development they determine the formation of new structures of practical knowledge On a more abstract level the creation of new knowledge structures is understood as constituting the basis for the further development of scientific knowledge Rich in subject matter and incisive in the theory it lays out this volume represents an important contribution to the history of science and epistemology Individually the fifteen case studies encompassing the history of architecture mining brewing glass production printing ballistics mechanics cartography cosmology and astronomy are replete with original research and offer new insights into the history of science Taken together the contributions remodel historical epistemology as a whole elucidating the underlining knowledge structures that transcend disciplinary boundaries and that unite practitioners across time and space
