

GALOIS EMBEDDING PROBLEMS WITH CYCLIC QUOTIENT OF ORDER p

JÁN MINÁČ^{*†} AND JOHN SWALLOW[‡]

ABSTRACT. Let K/F be a cyclic field extension of odd prime degree. We consider Galois embedding problems involving Galois groups with common quotient $\text{Gal}(K/F)$ such that corresponding normal subgroups are indecomposable $\mathbb{F}_p[\text{Gal}(K/F)]$ -modules. For these embedding problems we prove conditions on solvability, formulas for explicit construction, and results on automatic realizability.

INTRODUCTION

Let $p > 2$ be a prime, and suppose that K/F is a cyclic field extension of degree p . In this paper we consider Galois embedding problems involving Kummer extensions of K of degree p^n that are Galois over F , and we establish new automatic realizability results, whereby the solvability of one Galois embedding problem implies the solvability of another. (See e. g. [GSS, Section 5] for some automatic realizations of 2-groups as Galois groups.) We restrict ourselves to the case $p > 2$ because the case $p = 2$ is quite simple and does not lead to new results.

We focus particularly on the case when F contains a primitive p th root of unity. In fact, this paper is a continuation of [MS] wherein, under this hypothesis, we classified $\mathbb{F}_p[\text{Gal}(K/F)]$ -modules K^*/K^{**} using arithmetic invariants attached to K/F , and the investigations there were motivated by the embedding problems solved in this paper. When F is not of this type, we employ a descent argument in the case

Embedding Problems And Galois Modules:

Embedding Problems and Galois Modules Jan Brinkhuis, 1981 **Orders and their Applications** Irving Reiner, Klaus W. Roggenkamp, 2006-11-14 With contributions by numerous experts **Elementary and Analytic Theory of Algebraic Numbers** Władysław Narkiewicz, 2013-06-29 The aim of this book is to present an exposition of the theory of algebraic numbers excluding class field theory and its consequences There are many ways to develop this subject the latest trend is to neglect the classical Dedekind theory of ideals in favour of local methods However for numerical computations necessary for applications of algebraic numbers to other areas of number theory the old approach seems more suitable although its exposition is obviously longer On the other hand the local approach is more powerful for analytical purposes as demonstrated in Tate's thesis Thus the author has tried to reconcile the two approaches presenting a self contained exposition of the classical standpoint in the first four chapters and then turning to local methods In the first chapter we present the necessary tools from the theory of Dedekind domains and valuation theory including the structure of finitely generated modules over Dedekind domains In Chapters 2 3 and 4 the classical theory of algebraic numbers is developed Chapter 5 contains the fundamental notions of the theory of p -adic fields and Chapter 6 brings their applications to the study of algebraic number fields We include here Shafarevich's proof of the Kronecker-Weber theorem and also the main properties of adèles and idèles *Galois Module Structure of Algebraic Integers* Albrecht Fröhlich, 1983 **Brauer Type Embedding Problems** Arne Ledet, This monograph is concerned with Galois theoretical embedding problems of so called Brauer type with a focus on 2 groups and on finding explicit criteria for solvability and explicit constructions of the solutions Before considering questions of reducing the embedding problems and reformulating the solvability criteria the author provides the necessary theory of Brauer groups group cohomology and quadratic forms The book will be suitable for students seeking an introduction to embedding problems and inverse Galois theory It will also be a useful reference for researchers in the field **Publications mathématiques de Besançon N° 1/2010** Patrick Hild, 2010-03 Modular Calabi-Yau Threefolds Christian Meyer, 2005 The main subject of this book is the connection between Calabi-Yau threefolds and modular forms The book presents the general theory and brings together the known results It studies hundreds of new examples of rigid and non rigid modular Calabi-Yau threefolds and correspondences between them Conjectures about the possible levels of modular forms connected with Calabi-Yau threefolds are presented Tables of newforms of weight four and large levels are compiled and included in the appendix Jaquette *Ergebnisse der Mathematik und ihrer Grenzgebiete* Tommy Bonnesen, Werner Fenchel, 1983 *Elementary and Analytic Theory of Algebraic Numbers* Władysław Narkiewicz, 1990 **Mathematical Reviews**, 2001 *Manuscripta Mathematica*, 1992 □□□□□□, 1985 *Bulletin of the American Mathematical Society*, 2003 **Bulletin (new Series) of the American Mathematical Society**, 2007 *Reviews in Number Theory*, 1984-96, 1997 These six volumes include approximately 20 000 reviews of items in number theory that
