**Self-Adaptive Heuristics for Evolutionary Computation** Oliver Kramer, 2008-08-19 Evolutionary algorithms are successful biologically inspired meta heuristics Their success depends on adequate parameter settings The question arises how can evolutionary algorithms learn parameters automatically during the optimization Evolution strategies gave an answer decades ago self adaptation Their self adaptive mutation control turned out to be exceptionally successful But nevertheless self adaptation has not achieved the attention it deserves This book introduces various types of self adaptive parameters for evolutionary computation Biased mutation for evolution strategies is useful for constrained search spaces Self adaptive inversion mutation accelerates the search on combinatorial TSP like problems After the analysis of self adaptive crossover operators the book concentrates on premature convergence of self adaptive mutation control at the constraint boundary Besides extensive experiments statistical tests and some theoretical investigations enrich the analysis of the proposed concepts

 operationalizing a decision making support system in these circumstances by providing an environment that can adapt to
