The objective is to enable students to create a basic 3D model and prepare field drawings, procurement documents. Students will learn to create files and documents needed for prefabrication of ductwork and piping. Students will also learn basic CADmep customization and how to create their own custom Fabrication Items. This course is for new users of Autodesk® Fabrication CADmep™. This courseware supports a 4 day class and covers the indispensable core topics for working with Autodesk Fabrication CADmep. The teaching strategy is to start with a few basic tools that let the student create and edit a simple drawing. You then continue to develop those tools as well as being introduced to more advanced tools throughout the course. Not every command or option is covered because the intent is to show the most essential tools and concepts. Understanding the Fabrication CADmep workspace and user interface. Using basic modeling, editing and viewing tools. Creating shop drawing with annotation. Creating spool drawings and exporting to Fabrication CAMduct. Fabrication ESTmep. Customizing your Fabrication CADmep configuration. Prerequisites: An understanding of the sheetmetal ductwork and/or piping/plumbing industries. Training Manual for Structural Fabrication Hewitt-Robins, Inc., S.C. Committee for Technical Education, 1969* Handbook of Fabrication Processes Orville D. Lascoe, 1988-01-01 This book is a valuable reference for the materials engineer, the manufacturing engineer or the technician who wants a practical description of fabrication processes. Sheet metal fabrication processes are receiving greater attention and are more widely applied by the metalworking industries because of the savings in cost and material. This book compiles the proven theories and operations tested in industrial applications. Focus is on the non-chip producing machine tools that shape metals by shearing, pressing and forming. New materials and advances in tooling are discussed as well as the need for applied science in optimizing the operations for sheet metal fabrication processes. Examples of each of these forming processes are given and the text also describes the mechanics of each process so that a logical decision can be made concerning the best operation for a specific result. The volume is divided into five sections, each consisting of a series of chapters. The major sections cover fabricating presses, stamping and forming operations, plastics for

tooling structural shapes and non traditional machining A section on definitions and terminology is also included The book is profusely illustrated and indexed making it easy to find references to specific forming topics Written by an expert with 40 years of hands on practical engineering experience this Handbook contains the essential information you need on forming methods machinery and the response of materials
