Twenty-Five+ Buildings Every Architect Should Understand Simon Unwin, 2023-11-03 The underlying theme of *Twenty-Five Buildings Every Architect Should Understand* is the relationship of architecture to the human being: how it frames our lives and orchestrates our experience; how it can help us make sense of the world and contribute to our sense of identity and place. Exploring these dimensions through a wide range of case studies that illustrate the rich diversity of twentieth and twenty-first century architecture, this book is essential reading for every architect. With the addition of numerous shorter analyses, this new edition covers an even greater range of architectural ideas, providing students and architects with further inspiration for exploration in their own design work. Architects live by ideas. But where do they come from? And how do they shape buildings? There is no one right way to do architecture. This book illustrates many. Its aim is to explore the rich diversity of architectural creativity by analysing a wide range of examples to extract the ideas behind them. *Twenty-Five Buildings Every Architect Should Understand* is a companion to Simon Unwin's *Analysing Architecture: the Universal Language of Place Making* (most recent edition 2021) and part of the trilogy which also includes his *Exercises in Architecture: Learning to Think as an Architect* (second edition 2022). Together, the three books offer an introduction to the workings of architecture, providing for the three aspects of learning: theory, examples and practice. *Twenty-Five Buildings* focusses on analysing examples using the methodology offered by *Analysing Architecture*, which operates primarily through the medium of drawing. An underlying theme of *Twenty-Five Buildings Every Architect Should Understand* is the relationship of architecture to the human being: how it frames our lives and orchestrates our experiences; how it can help us give form to the world and contribute to our senses of identity and place. Exploring these dimensions through case studies that illustrate the rich diversity of twentieth and twenty-first century architecture, this book is essential reading and hopefully an inspiration for every architect. In this new edition, supplementary analysis and discussion has been added to each of the twenty-five case studies, drawing attention to their influences from and on other architects. A number of

extra shorter analyses have been included too following the practice of presenting extra small dishes interspersed among main courses in high end restaurants These additional short analyses account for the sign after Twenty Five in the title of this edition and double the number of buildings analysed to around fifty

Great Windows in Modern Architecture Kevin Adams, 2024-03-29 Windows are moments in modern architecture where we look to ascertain elegance technical expression and material language or to capture a certain atmosphere A window opening is as much an interval and an opportunity as it is a device for admitting light air or views it is simultaneously a physical aperture but also a philosophical opening of collaboration and reflection In order to understand the language of a building we might look to the detail of the window But what does this mean and why does modern architecture invest so much expression in the window This book explores how the act of detailing and situating windows in buildings is a key proponent in the language of architecture which both informs and works with the contingencies of design and construction It investigates 18 case studies in depth using painstakingly drawn details and vivid photographs in full colour to define what makes these windows great and how each window is situated within both its technical and philosophical context and as an overall development of modern architecture Case studies include the work of Walter Gropius Mies van der Rohe Pierre Chareau Frank Lloyd Wright Alvar Aalto Carlo Scarpa Le Corbusier Stirling and Gowan Raili and Reima Pietil Louis Kahn Peter Womersley Miralles Pin s Steven Holl Glen Murcutt and O Donnell Tuomey

Ecological Living Dominique Gauzin-Müller, Cité de l'architecture et du patrimoine (Paris, France), Institut français d'architecture, 2009 The pioneers of ecological architecture today are necessarily researchers as much as architects in any conventional sense of the term Sustainability is the key criterion in this field and ecologically sound solutions for the designs of homes are the key challenge homes the most commonly built structure Ecological Living assesses a selection of some recently built ecological habitats collecting several built examples from a variety of French architects examining precursors such as Frank Lloyd Wright Alvar Aalto and Pierre Lajus plus proposals for European architects and architecture students and inquiries into the ecological viability of detached housing and tower blocks The book is structured in thematic chapters such as Why is Action So Urgent The Precursors of Eco Responsible An International Panorama of the State of the Art and Into Action

The City in Geography Benedict Anderson, 2019-03-15 Monumental in scale and epic in development cities have become the most visible and significant symbol of human progress The geography on and around which they are constructed however has come to be viewed merely in terms of its resources and is often laid to waste once its assets have been stripped The City in Geography is an urban exploration through this phenomenon from settlement to city through physical geography which reveals an incremental progression of removing terrain topography and geography from the built environment ushering in and advancing global destruction and instability This book explains how the fall of geography in relationship to human survival has come through the loss of contact between urban dwellers and physical terrain and details the radical rethinking required to remedy the separations between the city its inhabitants and the

landscape upon which it was built Architectural Record ,2002 **Architecture** ,2003 **The Architects' Journal** ,2003 **The Iconic House** Dominic Bradbury,2009-10-27 The Iconic House features one hundred of the most important and influential architect designed houses in the world Inside cover *Australian Book Review* ,2003 **Proceedings of the 7th International Symposium for Environment-Behavior Studies** ,2006 **Interior Design** ,2002-07 *Building and Ground* Erin Elizabeth Moore,2003 The Pritzker Architecture Prize, 2002 Glenn Murcutt,2002 **Cite** ,2002 *The Pritzker Architecture Prize* ,2002 Extreme Sites Deborah Gans,Claire Weisz,2004-05-21 Tackling a hot green architectural topic brownfield sites this title asks the essential question how should urban and post industrial sites best be rehabilitated to balance ecological and human needs This issue of AD is devoted to what planners refer to as brownfields These are often sites made toxic through a recipe of urbanism and industry from our great water thoroughfares to our landfills They are often the only sites available to us for planning consideration The book examines the conflict between the demands of ecology and development when reclaiming such sites for re development bringing together multiple viewpoints from different disciplines Includes the internationally renowned Andy Goldsworthy Glenn Murcutt and Renzo Piano It will recast the topic in a fresh and current light that will interest a wide audience from students to practitioners Aerial photographs maps and photo essays will give the visuals a richness and breadth of appeal Green is an architectural buzzword and is viewed as the new parameter for good practice
