Global Change And Extreme Hydrology Testing Conventional Wisdom:

Global Change and Extreme Hydrology National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Hydrologic Science, 2011-11-17 Climate theory dictates that core elements of the climate system including precipitation evapotranspiration and reservoirs of atmospheric and soil moisture should change as the climate warms both in their means and extremes A major challenge that faces the climate and hydrologic science communities is understanding the nature of these ongoing changes in climate and hydrology and the apparent anomalies that exist in reconciling their extreme manifestations The National Research Council NRC Committee on Hydrologic Science COHS held a workshop on January 5 6 2010 that examined how climate warming translates into hydrologic extremes like floods and droughts The workshop brought together three groups of experts The first two groups consisted of atmospheric scientists and hydrologists focused on the scientific underpinnings and empirical evidence linking climate variability to hydrologic extremes The third group consisted of water managers and decision makers charged with the design and operation of water systems that in the future must be made resilient in light of a changing climate and an environment of hydrologic extremes Global Change and Extreme Hydrology summarizes the proceedings of this workshop This report presents an overview of the current state of the science in terms of climate change and extreme hydrologic events It examines the conventional wisdom that climate change will accelerate the hydrologic cycle fuel more evaporation and generate more precipitation based on an increased capacity of a warmer atmosphere to hold more water vapor The report also includes descriptions of the changes in frequency and severity of extremes the ability or inability to model these changes and the problem of communicating the best science to water resources practitioners in useful forums Global Change and Extreme Hydrology ,2011 Challenges and Opportunities in the Hydrologic Sciences National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Challenges and Opportunities in the Hydrologic Sciences, 2012-11-02 New research opportunities to advance hydrologic sciences promise a better understanding of the role of water in the Earth system that could help improve human welfare and the health of the environment Reaching this understanding will require both exploratory research to better understand how the natural environment functions and problem driven research to meet needs such as flood protection supply of drinking water irrigation and water pollution Collaboration among hydrologists engineers and scientists in other disciplines will be central to meeting the interdisciplinary research challenges outline in this report New technological capabilities in remote sensing chemical analysis computation and hydrologic modeling will help scientists leverage new research opportunities Climate Vulnerability, Volume 5 ,2013-06-14 Climate Vulnerability Volume 5 Climate Impacts on Extreme Weather Victor Ongoma, Hossein Tabari,2022-06-10 Climate Impacts on Extreme Weather Current to Future Changes on a Local to Global Scale presents fundamentals and advances in the science of weather and climate extremes building on the existing knowledge by using

regional and global case studies The book provides an analysis of historical and future changes physical processes measurements space time variability socioeconomic impact and risk management It provides policy makers researchers and students working in climate change with a thorough reference for understanding the diverse impacts of extreme weather and climate change on varying geographic scales With contributions from experts across the globe the book utilizes methods case studies modeling and analysis to present valuable up to date knowledge about the interaction of climate change weather and the many implications of the changing environment Offers comprehensive up to date coverage of climate research related to extremes Includes both regional and global case studies for applying research to practice providing a deeper understanding of the science Presents both observed and projected findings using primary research and models The Columbia River Treaty Robert William Sandford, Deborah Harford, Dr. Jon O'Riordan, 2014-11-14 Provocative passionate and populist RMB Manifestos are short and concise non fiction books of literary critical and cultural studies The Columbia River Treaty ratification in 1964 created the largest hydropower project in North America with additional emphasis on flood protection for the United States As the treaty approaches its 60th anniversary and the first opportunity for modification its signatories are preparing proposals for new ways forward and stakeholders on both sides of the border are speaking up The Columbia River Treaty A Primer is a vital work that clearly explains the nature of this complex water greement between Canada and the United States and how its impending update will impact communities landscapes industry and water supplies between the two countries for many years to come The authors include in the work a call to action in the hope that a renewed Columbia River Treaty might prove a model for other current transboundary water agreements around the world as they strive to meet not only the challenges of the present day but also the needs of future generations Encyclopedia of Agriculture and Food Systems Neal K. Van Alfen, 2014-07-29 Encyclopedia of Agriculture and Food Systems Second Edition Five Volume Set addresses important issues by examining topics of global agriculture and food systems that are key to understanding the challenges we face Questions it addresses include Will we be able to produce enough food to meet the increasing dietary needs and wants of the additional two billion people expected to inhabit our planet by 2050 Will we be able to meet the need for so much more food while simultaneously reducing adverse environmental effects of today s agriculture practices Will we be able to produce the additional food using less land and water than we use now These are among the most important challenges that face our planet in the coming decades The broad themes of food systems and people agriculture and the environment the science of agriculture agricultural products and agricultural production systems are covered in more than 200 separate chapters of this work The book provides information that serves as the foundation for discussion of the food and environment challenges of the world An international group of highly respected authors addresses these issues from a global perspective and provides the background references and linkages for further exploration of each of topics of this comprehensive work Addresses important challenges of sustainability and efficiency from a global perspective Takes a

Hydrological Extremes in a Changing Effects on Regional and Global Hydrology National Institute of Hydrology, 1992 Environment: Modelling and Attribution Analysis Yanlai Zhou, Cosmo Ngongondo, Nils Roar Sælthun, 2022-11-15 This book focuses on climate change and hydrological extremes i e droughts and floods which are globally important natural hazards with associated costly impacts on society and the environment Floods and droughts result from the superposition of different processes at various space and time scales physical processes in the atmosphere catchments the river systems and anthropogenic activities However the characteristics of hydrological extremes have been altered due to climate change and variability such that approaches for their detection attribution and the frequency of occurrence need to be revisited as they are no longer stationary processes For more accurate estimation of hydrological extremes under nonstationary and uncertain conditions there is a need for holistic assessments Time frequency analysis hydrological modeling physical cause analysis multivariate statistical analysis and uncertainty analysis are powerful tools for detecting attributing and making frequency analysis of nonstationary hydrological extremes in a changing climate Both nonstationarity and uncertainty of frequency analysis of extreme hydrological events should be integrated to reveal the possible operational alternatives to the assumption of stationarity in hydrological extremes frequency analysis In Focus a book series that showcases the latest accomplishments in water research Each book focuses on a specialist area with papers from top experts in the field It aims to be a vehicle for in depth understanding and inspire further conversations in the sector Storm Warning Robert William Sandford, 2015 Human beings and industrial based society are changing the composition of our planet's atmosphere and causing it to warm at an unnatural and oftentimes astonishing rate Much of that warmth is being absorbed by water which is causing an acceleration in the rate and manner in which water moves through the global hydrological cycle A warmer atmosphere carries more water vapor which means as temperatures continue to rise storms will be more intense last longer and cause more damage to our towns cities and vital infrastructure On the other side of the hydro climate coin we can also expect deeper more persistent and damaging droughts throughout the world resulting in dramatic losses difficult economic outcomes and fundamental alterations to landscape This highly considered accessible and readable book explains how changes in the water cycle have already begun to affect how we think about and value water security and climate stability and what we can do to ensure a sustainable future for our children and grandchildren
