Global Warming Gridlock Global Warming Gridlock:

Global Warming Gridlock David G. Victor, 2011-03-10 Global warming is one of today's greatest challenges. The science of climate change leaves no doubt that policies to cut emissions are overdue. Yet after twenty years of international talks and treaties, the world is now in gridlock about how best to do this. David G. Victor argues that such gridlock has arisen because international talks have drifted away from the reality of what countries are willing and able to implement at home. Most of the lessons that policy makers have drawn from the history of other international environmental problems won't actually work on the problem of global warming. Victor argues that a radical rethinking of global warming policy is required and shows how to make international law on global warming more effective. This book provides a roadmap to a lower carbon future based on encouraging bottom-up initiatives at national, regional, and global levels, leveraging national self-interest rather than wishful thinking.

Climate Change and Justice Jeremy Moss, 2015-11-13 This collection sheds new light on the key ethical issues of climate change justice.

Confronting Climate Gridlock Daniel S. Cohan, 2022-03-29 An atmospheric scientist explains why global climate change mitigation and energy decarbonization demand American diplomacy, technology, and policy. Daniel Cohan makes a compelling case that the problem of climate change is solvable. Fixing the gridlock on global action requires fixing the gridlock here in the United States of America. Cohan shows how that can be done. David Victor, UC San Diego Professor of environmental engineering. Daniel Cohan argues that escaping the gravest perils of climate change will first require American diplomatic, technological innovation, and policy to catalyze decarbonization globally. Combining his own expertise along with insights from more than a hundred interviews with diplomats, scholars, and clean technology pioneers, Cohan identifies flaws in previous efforts to combat climate change. He highlights opportunities for more successful strategies, including international climate clubs and accelerated development of clean energy technologies. Grounded in history and emerging scholarship, this book offers a forward-looking vision of solutions to confronting climate gridlock and a clear-eyed recognition of the challenges to enacting them.

Planet in Peril Michael Bess, 2022-10-13 Exploration of the top four mega dangers facing humankind and plots a hopeful path to dealing with them through global governance.

The Hartwell Approach to Climate Policy Steve Rayner, Mark Caine, 2014-09-19 The Hartwell Approach to Climate Policy presents a powerful critique of mainstream climate change policies and details a set of pragmatic alternatives based on the Hartwell Group's collective writings from 1988-2010. Drawing on a rich history of heterodox but increasingly accepted views on climate change policy, this book brings together in a single volume a series of key related texts that define the Hartwell critique of conventional climate change policies and the Hartwell approach to building more inclusive, pragmatic alternatives. This book tells of the story of how and why conventional climate policy has failed and, drawing from lessons learned, how it can be renovated. It does so by weaving together three strands of analysis. First, it highlights why the mainstream approach, as embodied by the Kyoto Protocol, has failed to produce real-world reductions in greenhouse gas emissions and delayed real

meaningful progress on climate change Second it explores the underlying political economic and technological factors which form the boundary conditions for climate change policy but which are often ignored by policy makers and advocates Finally it lays out a novel approach to climate change guided centrally by the goal of uplifting human dignity worldwide and the recognition that this can only succeed if pursued pragmatically economically and with democratic legitimacy With contributions from leading scholars in the field this work presents a original critique of climate policy and a constructive primer for how to improve it

Today's Social Issues Timothy W. Kneeland, 2016-07-01 Covering everything from abortion to gun control to immigration this book explains policies and positions of today s Democratic and Republican parties giving readers a complete understanding of modern day American politics and the 2016 presidential race This book cuts through rhetorical platitudes and partisan distortions to provide a balanced and up to date resource for understanding policy debates on social issues in statehouses around the country as well as in Washington DC It provides broad coverage of the parties and the forces that affect each party s positions examining every major social policy and taking into account historical differences between Democrats and Republicans in an evenhanded manner with emphasis on the key ideologies that set the two parties apart during the 2008 2014 midterms Author Timothy Kneeland presents an in depth study of the diversity of political opinion on today s most pressing social issues digging deeper than the typical black or white presentation of these debates in the media Readers will gain a detailed understanding of how the parties agree disagree and find compromise on the broad range of problems and issues facing American society in the 21st century

Politics and Climate Change: A History Andy May, 2022-09-04 These are stories of the political corruption of science Politicians work to forge a consensus they use persuasion intimidation and avoid or suppress debate Debating an issue leads to education it shows the question is more complex than it appears it makes the public consider all sides Education leads to caution not action The politician wants a decision he wants action so no debate Once the consensus is formed the public votes laws are passed regulations issued the minority concedes and conflict is avoided Science is not a belief It exists to challenge the consensus view It is how one person can show the overwhelming majority is mistaken Scientists do not vote they debate They gather facts make observations and analyze the data and try to show the consensus opinion is wrong Politicians and scientists don t mix They are like fire and water opposites But what about when no one trusts the politician and he must have a scientist for back up What happens when the government becomes the sole source of research money We address the attempt by politicians to control scientific research and research outcomes They do this by selectively funding projects that look for potential disasters ideally global disasters People love disaster stories journalists love disaster stories scientists love to be quoted in newspapers and on television If you frighten people enough they will give up their rights for security increasing government power So it is not surprising that as government has taken over funding scientific research scientists have migrated from research that helps people to researching possible catastrophes no matter how remote the possibility Science has devolved from improving

human lives to developing plots for disaster movies **Controversies in American Public Policy** John A. Hird, Michael Reese, Matthew Shilvock, 2004 Features debates selected from political and academic journals such as the Nation Commentary and the American prospect the readings supply important factual context for each debate and represent the best argument from each position **Gaia's Wager** Gary C. Bryner, 2001 Can environmentalism evolve into a powerful social movement that transforms human practices in ways that are ecologically sustainable Gary C Bryner contends that it is in our self interest as a species to ensure that environmental movements coalesce in the service of sustainability From the very first Earth Day to the setting of Agenda 21 for the new millennium this book traces the actors the issues and the institutions involved in moving environmentalism from a loose collection of fuzzy groups and goals to a new global force for change Will the next phase of environmental action resemble the WTO protests in Seattle the UN Kyoto Protocols or a Think Tank inside the Washington Beltway Gaia s Wager shows that movements play an important role between political parties and interest groups on the domestic scene and the unruly forces of globalization internationally Only social movements can catalyze a response to the global environmental threat that has a chance of both capturing imaginations and institutionalizing progress toward environmental sustainability Above all Gaia s Wager bets on the confluence of big ideas and social action to yield a more hopeful environmental future **Climate Alarmism Reconsidered** Robert L. Bradley, 2003 Demonstrates how the balance of evidence supports a benign enhanced greenhouse effect and how the case for mandatory greenhouse gas reductions depends on unrealistic assumptions This study states that climate alarmism and policy activism are unwarranted and counterproductive for the developed world and particularly for the world s energy poor The Global Environment: Institutions, Law, and Policy, 2nd Edition Regina S Axelrod, David Leonard Downie, Norman J Vig, 2005 A timely collection of essays that analyse key issues institutions laws and policies for the protection of the global environment The new edition of this popular text provides crucial historical background on the development of global environmental organisations and treaties engaging discussions of current and critical global environmental agreements and insights into national and international implementation of sustainable development principles Drawing together a distinguished list of international contributors the book includes six brand new chapters on such important topics as regime theory climate change hazardous chemical controls perspectives of the developing world and the European Union s and United States international environmental policies All other chapters have been thoroughly revised and updated The book includes a useful chronology of global environmental policy and a list of acronyms to help students in critical reading review and study *The CQ Researcher Bound Volume 2001* Kenneth Jost, David Masci, Mary H Cooper, Kathy Koch, 2002-03-01 **Encyclopedia of Science, Technology, and Ethics** Carl Mitcham, 2005 This encyclopedia considers both the professional ethics of science and technology and the social ethical and political issues raised by science and technology *American History* Robert James Maddox, 2002-07 This nineteenth edition of ANNUAL EDITIONS AMERICAN HISTORY VOLUME 2 provides convenient

Gridlock Thomas Hale,David Held,Kevin Young,2013-07-11 The issues that increasingly dominate the 21st century cannot be solved by any single country acting alone no matter how powerful To manage the global economy prevent runaway environmental destruction reign in nuclear proliferation or confront other global challenges we must cooperate But at the same time our tools for global policymaking chiefly state to state negotiations over treaties and international institutions have broken down The result is gridlock which manifests across areas via a number of common mechanisms The rise of new powers representing a more diverse array of interests makes agreement more difficult The problems themselves have also grown harder as global policy issues penetrate ever more deeply into core domestic concerns Existing institutions created for a different world also lock in pathological decision making procedures and render the field ever more complex All

of these processes in part a function of previous successful efforts at cooperation have led global cooperation to fail us even as we need it most Ranging over the main areas of global concern from security to the global economy and the environment this book examines these mechanisms of gridlock and pathways beyond them It is written in a highly accessible way making it relevant not only to students of politics and international relations but also to a wider general readership Cultural Analysis and the Navigation of Complexity Lisa Kaye Brandt, 2007-05-03 The complexities involved in social dilemmas and ecological troubles today challenge scientists to conduct analyses of cultural phenomena that push the boundaries of disciplines and blur the line between theory and practice Problems are not so much to be solved as they are to be explained predicted and navigated Luther P Gerlach Ph D Professor Emeritus of Anthropology at the University of Minnesota has exercised immense influence on social science policy and practice to accomplish these challenges Professor Gerlach is highly regarded within and beyond anthropology for two areas of outstanding research groundbreaking work on social movements and pioneering studies of local global environmental conflict i e the conflict between local social political and economic control versus global ecological and economic interdependence This volume s Preface traces Professor Gerlach s intellectual biography and the peer reviewed chapters indicate the far reaching impact he and his research continue to have on academic and applied science Topics cover theories and methods as well as timely case studies in Global climate policy Language and social movements Environmental and ecosystem management Public debate environmental justice and risk construction Complexity theory and organizations Cultural expression and archaic hunting methods Energy use Political economy and witch killings Public health
