## **Global Environmental Change And Human Security:**

*A Changing Environment for Human Security* Linda Sygna, Karen O'Brien, Johanna Wolf, 2013-06-26 Environmental change presents a new context and new opportunities for transformational change This timely book will inspire new ways of understanding the relationship between environmental change and human security A Changing Environment for Human Security Transformative Approaches to Research Policy and Action both supports and informs a call for new transformative approaches to research policy and action The chapters in this book include critical analyses case studies and reflections on contemporary environmental and social challenges with a strong emphasis on those related to climate change Human thoughts and actions have contributed to an environment of insecurity manifested as multiple interacting threats that now represent a serious challenge to humanity Yet humans also have the capacity to collectively transform the economic political social and cultural systems and structures that perpetuate human insecurities These fresh perspectives on global environmental change from an interdisciplinary group of international experts will inspire readers whether students researchers policy makers or practitioners to think differently about environmental issues and sustainability The contributions show that in a changing environment human security is not only a possibility but a choice **Global**

**Environmental Change and Human Security** Richard A. Matthew, Jon Barnett, Bryan McDonald, Karen L. O'Brien, 2009-10-09 Experts discuss the risks global environmental change poses for the human security including disaster and disease violence and increasing inequity In recent years scholars in international relations and other fields have begun to conceive of security more broadly moving away from a state centered concept of national security toward the idea of human security which emphasizes the individual and human well being Viewing global environmental change through the lens of human security connects such problems as melting ice caps and carbon emissions to poverty vulnerability equity and conflict This book examines the complex social health and economic consequences of environmental change across the globe In chapters that are both academically rigorous and policy relevant the book discusses the connections of global environmental change to urban poverty natural disasters with a case study of Hurricane Katrina violent conflict with a study of the decade long Nepalese civil war population gender and development The book makes clear the inadequacy of traditional understandings of security and shows how global environmental change is raising new unavoidable questions of human insecurity conflict cooperation and sustainable development Contributors W Neil Adger Jennifer Bailey Jon Barnett Victoria Basolo Hans Georg Bohle Mike Brklacich May Chazan Chris Cocklin Geoffrey D Dabelko Indra de Soysa Heather Goldsworthy Betsy Hartmann Robin M Leichenko Laura Little Alexander L pez Richard A Matthew Bryan McDonald Eric Neumayer Kwasi Nsiah Gyabaah Karen L O'Brien Marvin S Soroos Bishnu Raj Upreti **Environmental Change and Human Security in Africa and the Middle East** Mohamed Behnassi, Katriona McGlade, 2017-01-17 This volume brings together insights on the interactions between environmental change and human security in the Middle East and Africa These regions face particular

challenges in relation to environmental degradation the decline of natural resources and consequent risks to current and future human security The chapters provide topical analysis from a range of disciplines on the theory discourse policy and practice of responding to global environmental change and threats to human security Case studies from Morocco Tunisia Egypt Turkey Iraq and Syria provide empirical evidence with a focus section dedicated to the critical issue of water resources and water security in the region The contributions demonstrate above all that the risks posed to human security arise through multiple and interconnected processes operating across diverse spatial and temporal scales The complexity of these processes requires new ways of thinking and intervening As a contribution the current volume provides engaging insights from theory and practice for those seeking to address the challenges of environmental change *Climate Change, Ethics and Human Security* Karen O'Brien, Asunción Lera St. Clair, Berit Kristoffersen, 2010-07-22 Presenting human security perspectives on climate change this volume raises issues of equity ethics and environmental justice as well as our capacity to respond to what is increasingly considered to be the greatest societal challenge for humankind Written by international experts it argues that climate change must be viewed as an issue of human security and not an environmental problem that can be managed in isolation from larger questions concerning development trajectories and ethical obligations towards the poor and to future generations The concept of human security offers a new approach to the challenges of climate change and the responses that could lead to a more equitable and sustainable future Climate Change Ethics and Human Security will be of interest to researchers policy makers and practitioners concerned with the human dimensions of climate change as well as to upper level students in the social sciences and humanities interested in climate change **Coping with Global Environmental Change, Disasters and Security** Hans Günter Brauch, Úrsula Oswald Spring, Czesław Mesjasz, John Grin, Patricia Kameri-Mbote, Béchir Chourou, Pál Dunay, Joern Birkmann, 2011-02-03 Coping with Global Environmental Change Disasters and Security Threats Challenges Vulnerabilities and Risks reviews conceptual debates and case studies focusing on disasters and security threats challenges vulnerabilities and risks in Europe the Mediterranean and other regions It discusses social science concepts of vulnerability and risks global regional and national security challenges global warming floods desertification and drought as environmental security challenges water and food security challenges and vulnerabilities vulnerability mapping of environmental security challenges and risks contributions of remote sensing to the recognition of security risks mainstreaming early warning of conflicts and hazards and provides conceptual and policy conclusions *Handbook on Climate Change and Human Security* Michael R Redclift, Marco Grasso, 2013-10-31 The Handbook is international in scope and provides an assessment that will be of value to academics students and policy professionals alike NGOs and policy institutes which need a grasp of the specificity and range of the issues and problems will al *Facing Global Environmental Change* Hans Günter Brauch, Navnita Chadha Behera, Patricia Kameri-Mbote, John Grin, Úrsula Oswald Spring, Béchir Chourou, Czesław Mesjasz, Heinz Krummenacher, 2009-05-15 The year 2007 could perhaps

accurately be described as the year when climate change finally received the attention that this challenge deserves globally. Much of the information and knowledge that was created in this field during the year was the result of the findings of the Fourth Assessment Report AR4 of the Intergovernmental Panel on Climate Change (IPCC) which were disseminated on a large scale and reported extensively by the media. This was the result not only of a heightened interest on the part of the public on various aspects of climate change but also because the IPCC itself proactively attempted to spread the findings of its AR4 to the public at large. The interest generated on the scientific realities of climate change was further enhanced by the award of the Nobel Peace Prize to the IPCC and former Vice President of the US Al Gore. By taking this decision in favour of a leader who has done a great deal to create awareness on climate change and a body that assesses all scientific aspects of climate change and disseminates the result of its findings, the Norwegian Nobel Committee has clearly drawn the link between climate change and peace in the world.

**Security and Environmental Change** Simon Dalby, 2009-07-27 Simon Dalby provides an accessible and engaging account of the challenges we face in responding to security and environmental change. He traces the historical roots of current thinking about security and climate change to show the roots of the contemporary concern.

**Climate Change, Human Security and Violent Conflict** Jürgen Scheffran, Michael Brzoska, Hans Günter Brauch, Peter Michael Link, Janpeter Schilling, 2012-05-26 Severe droughts, damaging floods and mass migration. Climate change is becoming a focal point for security and conflict research and a challenge for the world's governance structures. But how severe are the security risks and conflict potentials of climate change? Could global warming trigger a sequence of events leading to economic decline, social unrest and political instability? What are the causal relationships between resource scarcity and violent conflict? This book brings together international experts to explore these questions using in-depth case studies from around the world. Furthermore, the authors discuss strategies, institutions and cooperative approaches to stabilize the climate-society interaction.

**Global Environmental Change and Human Security, GECHS** Steve Lonergan, 1999

Climate Change and Security Christian Webersik, 2010-05-05 Human-induced climate change is causing resource scarcities, natural disasters and mass migrations which in turn destabilize national, international and human security structures and multiply the human inputs to climate change. Alarms about the expanding role of climate change as a force multiplier of existing threats to national, international and human security structures are being raised at all levels of governance and intelligence, national including the US Senate, the Director of National Intelligence, the Central Intelligence Agency and the Pentagon; transnational including the European Union and the United Nations; and private such as the Central News Agency and the American Security Project. *Climate Change and Security: A Gathering Storm of Global Challenges* focuses on the three major feedback effects of human-induced climate change on human and international security: resource scarcity, natural disasters and sea level rise. Decreasing per capita availability of renewable resources due to such regional effects of climate change as drought and desertification leads to intensified competition for these resources and may result in

armed violence especially when compounded by conditions of rapid population growth tribalism and sectarianism as in Darfur and Somalia The increase in the frequency and intensity of meteorological disasters associated with global warming weakens already debilitated tropical societies and makes them still more vulnerable to political instability as in Haiti Sea level rise will lead to disruptive mass migrations of climate refugees as dense littoral populations are forced to abandon low lying coastal regions as in Bangladesh

development and human security presents a comprehensive analysis of severe global warming and its potential to impact all aspects of human life and security. It has been observed that climate change will most drastically impact poor tropical regions of the world for various reasons. The main focus of this collection of essays is to analyze the pro and cons of the global warming and climate change debate among scholars, policymakers and scientists as well as to examine the potential adverse impact of global warming, climate change on social and economic development and human security, food, health, immigration etc. Much controversy exists on the topic and many scientific reports issued by think tanks, United Nations groups of scientists, NGOs, environmentalists and policymakers are concerned about it. An extensive discussion and review of literature sets the tone and framework for the volume and facilitates the volume's analyses of the relationship between prevailing climate change/global warming models and their ability to provide us information on the topic. Exclusion of North America is deliberate. Included are case studies from countries in Asia, Latin America, Europe, Russia and the Middle East. *Climate Change, Policy and Security* Donald Wallace, Daniel Silander, 2018-04-17. This book examines the multiple strategies proposed by the international community for addressing global climate change (GCC) from both human and state security perspectives. It examines what is needed from major states working within the UN framework to engage with the multiple dimensions of a strategy that addresses GCC and its impacts where such engagement promotes both human and state security. Two broad frameworks for approaching these issues provide the basis of discussion for the individual chapters which discuss the strategies being undertaken by major state powers: the US, the EU, China, India, Japan and Russia. The first framework considers the multiple strategies: mitigation, adaptation and capacity building required of the international community to address the effects of GCC. The second framework considers the differentiation of GCC policies in terms of security and how the efficacy of these strategies could be impacted by whether priority is given to state security over human security concerns. This book will be of much interest to students of human security, climate change, foreign policy and International Relations.

R. Redclift, 2002-01-01. In the post Cold War era the pre-eminent threats to our security derive from human degradation of vital ecosystems as well as the possibility of war and terrorist attack. This substantial book examines this new security environment paradigm and the way in which the activities of societies are shifting the balance.

with nature The distinguished authors investigate this redefinition of security with particular reference to environmental threats such as climate change and the availability of adequate supplies of food and water They illustrate how unfettered economic growth rising levels of personal consumption and unsustainable natural resource and energy procurement are taking a heavy toll on the global environment This in turn is forcing both developed and developing countries to re evaluate the more immediate environmental security of their own populations For a truly global perspective the authors present a series of country case studies looking at issues of security and environment and comparing how they influence policy and human well being They also discuss a number of theoretical issues which underpin discussions of environmental security demonstrating that this is a relatively new and essentially contested concept
