Fundamentals of Geomorphology Richard Huggett, 2016-11-21 The new fourth edition of Fundamentals of Geomorphology continues to provide a comprehensive introduction to the subject by discussing the latest developments in the field as well as covering the basics of Earth surface forms and processes The revised edition has an improved logically cohesive structure added recent material on Quaternary environments and landscapes landscape evolution and tectonics as well as updated information in fast changing areas such as the application of dating techniques digital terrain modelling historical contingency preglacial landforms neocatastrophism and biogeomorphology The book begins with a consideration of the nature of geomorphology process and form history and geomorphic systems and moves on to discuss Endogenic processes structural landforms associated with plate tectonics and those associated with volcanoes impact craters and folds faults and joints Exogenic processes landforms resulting from or influenced by the exogenic agencies of weathering running water flowing ice and meltwater ground ice and frost the wind and the sea landforms developed on limestone and long term geomorphology a discussion of ancient landforms including palaeosurfaces stagnant landscape features and evolutionary aspects of landscape change Featuring over 400 illustrations diagrams and tables Fundamentals of Geomorphology provides a stimulating and innovative perspective on the key topics and debates within the field of geomorphology Written in an accessible and lively manner and providing guides to further reading chapter summaries and an extensive glossary of key terms this is an indispensable undergraduate level textbook for students of physical geography

Geomorphology and Global Tectonics Michael A. Summerfield, 2000-04-07 Presents the state of current research on the inter relationships between global tectonics and macroscale landscape development across a wide

range of topics and study areas The last 10 years have witnessed a remarkable growth in interest in the relationships between global tectonics and the Earth's macroscale topographic features This new research emphasis has emerged from a range of practitioners within the earth sciences including geophysicists concerned with what can be learnt about tectonic processes from their topographic effects geologists interested in the factors controlling erosion and the supply of material to sedimentary basins and geomorphologists wanting to understand the role of tectonics in landscape evolution Various technical developments and new sources of data have also contributed to these developments such as the construction of coupled tectonic surface process numerical models of large scale landscape development the creation of large area high resolution digital elevation models and the derivation of long term denudational records using methods such as thermochronology This book presents an overview of innovative research in the area and provides directions for future research Each chapter provides up to date surveys of key research questions reports on important current work and highlights outstanding research issues It will be invaluable to those across the earth science community who are interested in the relationships between tectonics and geography Geomorphology of Brazil: Complexity, Interscale and Landscape Gisele Barbosa dos Santos, Miguel Fernandes Felipe, Roberto Marques Neto, 2022-08-30 This book presents the most relevant articles selected from the annals of the symposium In the last few years Brazilian Geomorphology has experienced a series of epistemological and methodological innovations expressed by the incorporation of the complexity paradigm by the progressive break with the climate paradigm by the emergency role of new theories and by the advances in methodological fields favored by the adherence to geochronological techniques and in function of the increasingly widespread use of geotechnologies Furthermore the Anthropocene Technocene emerge claims to be more than only a temporal cut but as conceptions of a science engaged with social and environmental issues The National Symposium of Geomorphology in the maturity of its 13th edition constitutes a portrait and an important sample of Brazilian geomorphological production aggregating works carried out in the most diverse types of landscapes of Brazil The book provides an overview of the current scientific production of Brazilian Geomorphology highlighting the diversity of landscapes and geoheritage in Brazil the complexity of the morphogenetic and morphodynamic processes responsible for shaping its surface and the various abundant methodologies used in geomorphological studies in tropical areas *Environmental Change* Richard Huggett, 2003-09-02 *Environmental Change* explores the nature causes rates and directions of environmental change throughout earth history Huggett introduces the interdependent parts of the natural environment cosmic ecological geological and the dynamic nature of the environmental system Integrating a wealth of examples and illustrations from around the world the book examines evidence and causes of change in life climate air and water soils sediments and landforms and the impacts of human environment interaction **Encyclopedia of World Climatology** John E. Oliver, 2008-04-23 Today given the well publicized impacts of events such as El Niño there is an unequaled public awareness of how climate affects the quality of life and

environment Such awareness has created an increasing demand for accurate climatological information This information is now available in one convenient accessible source the Encyclopedia of World Climatology This comprehensive volume covers all the main subfields of climatology supplies information on climates in major continental areas and explains the intricacies of climatic processes The level of presentation will meet the needs of specialists university students and educated laypersons A successor to the 1986 Encyclopedia of Climatology this compendium provides a clear explanation of current knowledge and research directions in modern climatology This new encyclopedia emphasizes climatological developments that have evolved over the past twenty years It offers more than 200 informative articles prepared by 150 experts on numerous subjects ranging from standard areas of study to the latest research studies The relationship between climatology and both physical and social science is fully explored as is the significance of climate for our future well being The information is organized for speedy access Entries are conveniently arranged in alphabetical order thoroughly indexed and cross referenced Every entry contains useful citations to additional source materials The Editor John E Oliver is Professor Emeritus at Indiana State University He holds a B Sc from London University and a MA and Ph D from Columbia University He taught at Columbia University and then at Indiana State where he was formerly Chair of the Geography Geology Department and Associate Dean College of Arts and Sciences He has written many books and journal articles in Climatology Applied Climatology and Physical Geography

Mountains, Climate and Biodiversity Carina Hoorn, Allison Perrigo, Alexandre Antonelli, 2018-02-22 Mountains Climate and Biodiversity A comprehensive and up to date synthesis for students and researchers Mountains are topographically complex formations that play a fundamental role in regional and continental scale climates They are also cradles to all major river systems and home to unique and often highly biodiverse and threatened ecosystems But how do all these processes tie together to form the patterns of diversity we see today Written by leading researchers in the fields of geology biology climate and geography this book explores the relationship between mountain building and climate change and how these processes shape biodiversity through time and space In the first two sections you will learn about the processes theory and methods connecting mountain building and biodiversity In the third section you will read compelling examples from around the world exploring the links between mountains climate and biodiversity Throughout the 31 peer reviewed chapters a non technical style and synthetic illustrations make this book accessible to a wide audience A comprehensive glossary summarises the main concepts and terminology Readership Mountains Climate and Biodiversity is intended for students and researchers in geosciences biology and geography It is specifically compiled for those who are interested in historical biogeography biodiversity and conservation

Rock Weathering and Landform Evolution David A. Robinson, D. A. Robinson, R. B. G. Williams, 1994-12-05 Rock Weathering and Landform Evolution brings together a series of important studies on rock weathering by leading

researchers and illustrates the diversity of approaches and techniques that are currently being used by geomorphologists to study weathering processes and responses. The book commences with a number of research studies and review chapters on weathering processes and weathered products. This is followed by several discussions of the weathering of cut or dressed rock in urban and coastal environments. Contributors then examine the application of weathering and weathering rates to the dating of deposits or rock surfaces. The final section of the book comprises studies of the relationship between weathering and landforms in a variety of climatic environments. The contributions included in this book cover a wide range of topics and demonstrate the many advances that are being made by researchers investigating rock weathering. Some of the studies deal with state of the art technology others the very traditional geomorphological skills of observation and deductive reasoning backed up as necessary by statistical analysis. This volume is the first collection of papers on weathering published for many years and provides a wealth of information not just to geomorphologists but also to geologists engineers architects and archaeologists.
