Copyright Office, 1978 Chemistry, 2001 United States Catalog Mary Burnham.Carol Hurd.1928 Laboratory Experiments in General Chemistry Herman Schlundt, 2015-06-25 Excerpt from Laboratory Experiments in General Chemistry The experiments outlined in this manual are designed primarily for college students who have not had a course in chemistry in a preparatory school The exercises represent the laboratory work of a comparatively brief introductory course in General Chemistry The experiments are to be conducted under the guidance of an instructor and are to be supplemented by class room demonstrations in connection with recitations from a text book in General Chemistry for college students or by illustrated lectures and text book assignments Frequently the experiments do not furnish sufficient information to enable the student to answer some of the questions and make the explanations that are to appear in his notebook. The necessary information can generally be obtained from the text book and it is my plan to have the student use the text book and laboratory outline as companion volumes in the laboratory To facilitate the students progress in this connection page references to two widely used texts have been inserted My experience goes to show that the student will thus make very efficient use of his time that he will give care and thought to his work and that the laboratory work can be successfully made the central feature of instruction in the course In preparing the experiments the substances chosen for study have purposely been limited to avoid scattering the students efforts Intensive rather than extensive study has been the underlying idea in sleeting the exercises Extended experiments on the metallic elements have not been included as I feel that this work should be undertaken in Analytical Chemistry and be allotted some of the time so largely used for laboratory practice in following a scheme of separations I fully realize the value of practice in the identification of unknown substances and this feature of laboratory work has been duly emphasized and it is hoped in a manner which preserves its educational value Emphasis has also been placed upon the general reactions of acids bases and salts the processes of oxidation and reduction and chemical changes prominent in everyday life About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www forgottenbooks com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition. We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
