Embedded Multiprocessors Scheduling And Synchronization Signal Processing And Communications:

Embedded Multiprocessors Sathya Sriram, Shuvra S. Bhattacharyya, 2000-03-30 Embedded Multiprocessors Scheduling and Synchronization Series Volume 3 This item is part of the Signal Processing and Communications series Application specific embedded multiprocessors are increasingly found today in high performance communications and multimedia systems such as cellular phones and base stations high speed modems set top boxes and switches in high speed networks Systematic design and analysis of such embedded multiprocessors is becoming a very important research area in industry and academia This book focuses on the incorporation of interprocessor communication costs into multiprocessor scheduling decisions modeling and analysis of multiprocessor system performance and the application of the synchronization graph model to the development of hardware and software that can significantly reduce interprocessor communication overhead Embedded Multiprocessors is a one of a kind single source reference indispensable for electrical and electronics computer communications signal processing and microprocessing engineers and upper level undergraduate and graduate students in these disciplines

Embedded Multiprocessors Sundararajan Sriram, Shuvra S. Bhattacharyya, 2018-10-03 Techniques for Optimizing Multiprocessor Implementations of Signal Processing Applications An indispensable component of the information age signal processing is embedded in a variety of consumer devices including cell phones and digital television as well as in communication infrastructure such as media servers and cellular base stations Multiple programmable processors along with custom hardware running in parallel are needed to achieve the computation throughput required of such applications Reviews important research in key areas related to the multiprocessor implementation of multimedia systems Embedded Multiprocessors Scheduling and Synchronization Second Edition presents architectures and design methodologies for parallel systems in embedded digital signal processing DSP applications It discusses application modeling techniques for multimedia systems the incorporation of interprocessor communication costs into multiprocessor scheduling decisions and a modeling methodology the synchronization graph for multiprocessor system performance analysis The book also applies the synchronization graph model to develop hardware and software optimizations that can significantly reduce the interprocessor communication overhead of a given schedule Chronicles recent activity dealing with single chip multiprocessors and dataflow models This edition updates the background material on existing embedded multiprocessors including single chip multiprocessors It also summarizes the new research on dataflow models for signal processing that has been carried out since the publication of the first edition Harness the power of multiprocessors This book explores the optimization of interprocessor communication and synchronization in embedded multiprocessor systems It shows you how to design multiprocessor computer systems that are streamlined for multimedia applications

Adaptive Digital Filters

Maurice Bellanger, 2001-07-20 This text emphasizes the intricate relationship between adaptive filtering and signal analysis highlighting stochastic processes signal representations and properties analytical tools and implementation methods This

second edition includes new chapters on adaptive techniques in communications and rotation based algorithms It provides practical applications in information estimation and circuit theories

Video Coding for Wireless Communication Systems King N. Ngan, Chi W. Yap, Keng T. Tan, 2018-10-03 Explains the transmission of image and video information over wireless channels Describes MPEG 4 the latest video coding standard Discusses error resilient combined source channel image and video coders and multiple access spread spectrum and future generation wireless video communication systems

Satellite Communication Engineering Michael Olorunfunmi Kolawole, 2002-05-24 Highlighting satellite and earth station design links and communication systems error detection and correction and regulations and procedures for system modeling integrations testing and evaluation Satellite Communication Engineering provides a simple and concise overview of the fundamental principles common to information communications It

Multidimensional Discrete Unitary Transforms Artyom M. Grigoryan, Sos S. Agaian, 2003-07-31 This reference presents a more efficient flexible and manageable approach to unitary transform calculation and examines novel concepts in the design classification and management of fast algorithms for different transforms in one two and multidimensional cases Illustrating methods to construct new unitary transforms for best algorithm selection and development in real world applications the book contains a wide range of examples to compare the efficacy of different algorithms in a variety of one two and three dimensional cases Multidimensional Discrete Unitary Transforms builds progressively from simple representative cases to higher levels of generalization

Document and Image Compression Mauro Barni, 2018-10-08 Although it s true that image compression research is a mature field continued improvements in computing power and image representation tools keep the field spry Faster processors enable previously intractable compression algorithms and schemes and certainly the demand for highly portable high quality images will not abate Document and Image Compression highlights the current state of the field along with the most probable and promising future research directions for image coding Organized into three broad sections the book examines the currently available techniques future directions and techniques for specific classes of images It begins with an introduction to multiresolution image representation advanced coding and modeling techniques and the basics of perceptual image coding This leads to discussions of the JPEG 2000 and JPEG LS standards lossless coding and fractal image compression New directions are highlighted that involve image coding and representation paradigms beyond the wavelet based framework the use of redundant dictionaries the distributed source coding paradigm and novel data hiding techniques The book concludes with techniques developed for classes of images where the general purpose algorithms fail such as for binary images and shapes compound documents remote sensing images medical images and VLSI layout image data Contributed by international experts Document and Image Compression gathers the latest and most important developments in image coding into a single convenient and authoritative source

Speech Enhancement Philipos C. Loizou, 2007-06-07 This book covers traditional speech enhancement algorithms such as spectral subtraction and Wiener filtering algorithms as well as

state of the art algorithms including minimum mean squared error algorithms that incorporate signal presence uncertainty and subspace algorithms that incorporate psychoacoustic models The coverage includes objective and subjective measures used to evaluate speech quality and intelligibility Divided into three parts the book presents the digital signal processing and speech signal fundamentals needed to understand speech enhancement algorithms the various classes of speech enhancement algorithms proposed over the last two decades and the methods and measures used to evaluate the performance of speech enhancement algorithms
