GALOIS EMBEDDING PROBLEMS WITH CYCLIC QUOTIENT OF ORDER p

JÁN MINÁČ[*][†] AND JOHN SWALLOW[‡]

ABSTRACT. Let K/F be a cyclic field extension of odd prime degree. We consider Galois embedding problems involving Galois groups with common quotient $\mathrm{Gal}(K/F)$ such that corresponding normal subgroups are indecomposable $\mathbb{F}_p[\mathrm{Gal}(K/F)]$-modules. For these embedding problems we prove conditions on solvability, formulas for explicit construction, and results on automatic realizability.

INTRODUCTION

Let $p > 2$ be a prime, and suppose that K/F is a cyclic field extension of degree p. In this paper we consider Galois embedding problems involving Kummer extensions of K of degree p^n that are Galois over F, and we establish new automatic realizability results, whereby the solvability of one Galois embedding problem implies the solvability of another. (See e. g. [GSS, Section 5] for some automatic realizations of 2-groups as Galois groups.) We restrict ourselves to the case $p > 2$ because the case $p = 2$ is quite simple and does not lead to new results.

We focus particularly on the case when F contains a primitive pth root of unity. In fact, this paper is a continuation of [MS] wherein, under this hypothesis, we classified $\mathbb{F}_p[\mathrm{Gal}(K/F)]$-modules $K^\times/K^{\times p}$ using arithmetic invariants attached to K/F, and the investigations there were motivated by the embedding problems solved in this paper. When F is not of this type, we employ a descent argument in the case
