Is used to test the presence of monosaccharides.

- The Benedict test is a test for **monosaccharides**; simple sugars like glucose or fructose (fruit sugar). In contact with monosaccharides, the Benedict solution turns from blue to green to orange.

Does **Sample A** contain monosaccharides? Yes

Note: **Disaccharides** such as sucrose (table sugar) and lactose (milk sugar) are more complex than monosaccharides. The Benedict test does not detect disaccharides directly.

Introduction: Most food is composed of three types of molecules: **carbohydrates**, **proteins**, and **lipids**.

- Carbohydrates such as **starches** and sugars are major source of energy. Simple sugars are found in sweets and fruits. Starches are found in potatoes, cereal, pasta, flour, and other plant products.
- Proteins are used in body structures such as muscles, skin, and hair. Rich sources of proteins include meats, dairy products, and beans.
- Lipids (fats and oils) are used for energy, insulation, and as an essential building block of cells. Meats, dairy products, and oily plants such as olives are rich in lipids.

Guiding Principles for Developing Dietary Reference Intakes Based on Chronic Disease National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Food and Nutrition Board, Committee on the Development of Guiding Principles for the Inclusion of Chronic Disease Endpoints in Future Dietary Reference Intakes, 2017-12-21 Since 1938 and 1941 nutrient intake recommendations have been issued to the public in Canada and the United States respectively. Currently defined as the Dietary Reference Intakes (DRIs), these values are a set of standards established by consensus committees under the National Academies of Sciences Engineering and Medicine and used for planning and assessing diets of apparently healthy individuals and groups. In 2015 a multidisciplinary working group sponsored by the Canadian and U.S. government DRI steering committees convened to identify key scientific challenges encountered in the use of chronic disease endpoints to establish DRI values. Their report, *Options for Basing Dietary Reference Intakes (DRIs) on Chronic Disease*, Report from a Joint US Canadian Sponsored Working Group outlined and proposed ways to address conceptual and methodological challenges related to the work of future DRI Committees. This report assesses the options presented in the previous report and determines guiding principles for including chronic disease endpoints for food substances that will be used by future National Academies committees in establishing DRIs.
