Foundations of Empirical Software Engineering Barry Boehm, Hans Dieter Rombach, Marvin V. Zelkowitz, 2005-05-13
Although software engineering can trace its beginnings to a NATO conference in 1968 it cannot be said to have become an empirical science until the 1970s with the advent of the work of Prof Victor Robert Basili of the University of Maryland In addition to the need to engineer software was the need to understand software Much like other sciences such as physics chemistry and biology software engineering needed a discipline of observation theory formation experimentation and feedback By applying the scientific method to the software engineering domain Basili developed concepts like the Goal Question Metric method the Quality Improvement Paradigm and the Experience Factory to help bring a sense of order to the ad hoc developments so prevalent in the software engineering field On the occasion of Basili's 65th birthday we present this book containing reprints of 20 papers that defined much of his work We divided the 20 papers into 6 sections each describing a different facet of his work and asked several individuals to write an introduction to each section Instead of describing the scope of this book in this preface we decided to let one of his papers the keynote paper he gave at the International Conference on Software Engineering in 1996 in Berlin Germany to lead off this book He better than we can best describe his views on what is experimental software engineering

Perspectives on the Future of Software Engineering Jürgen Münch, Klaus Schmid, 2013-06-13 The dependence on quality

software in all areas of life is what makes software engineering a key discipline for today's society. Thus over the last few decades it has been increasingly recognized that it is particularly important to demonstrate the value of software engineering methods in real world environments a task which is the focus of empirical software engineering. One of the leading protagonists of this discipline worldwide is Prof. Dr. h.c. Dieter Rombach who dedicated his entire career to empirical software engineering. For his many important contributions to the field he has received numerous awards and recognitions including the U.S. National Science Foundation's Presidential Young Investigator Award and the Cross of the Order of Merit of the Federal Republic of Germany. He is a Fellow of both the ACM and the IEEE Computer Society. This book published in honor of his 60th birthday is dedicated to Dieter Rombach and his contributions to software engineering in general as well as to empirical software engineering in particular. This book presents invited contributions from a number of the most internationally renowned software engineering researchers like Victor Basili, Barry Boehm, Manfred Broy, Carlo Ghezzi, Michael Jackson, Leon Osterweil and of course by Dieter Rombach himself. Several key experts from the Fraunhofer IESE, the institute founded and led by Dieter Rombach, also contributed to the book. The contributions summarize some of the most important trends in software engineering today and outline a vision for the future of the field. The book is structured into three main parts. The first part focuses on the classical foundations of software engineering such as notations, architecture and processes, while the second addresses empirical software engineering in particular as the core field of Dieter Rombach's contributions. Finally, the third part discusses a broad vision for the future of software engineering.

Lecture Notes on Empirical Software Engineering Natalia Juristo, Ana M. Moreno, 2003-01-01. Empirical verification of knowledge is one of the foundations for developing any discipline. As far as software construction is concerned, the empirically verified knowledge is not only sparse but also not very widely disseminated among developers and researchers. This book aims to spread the idea of the importance of empirical knowledge in software development from a highly practical viewpoint. It has two goals: 1. Define the body of empirically validated knowledge in software development so as to advise practitioners on what methods or techniques have been empirically analysed and what the results were. 2. As empirical tests have traditionally been carried out by universities or research centres, propose techniques applicable by industry to check on the software development technologies they use.

Contents: Limitations of Empirical Testing; Technique Knowledge; N. Juristo et al. Replicated Studies; Building a Body of Knowledge about Software Reading Techniques; F. Shull et al. Dieter Rombach,Victor R. Basili,Richard W. Selby,1993 We have only begun to understand the experimental nature of software engineering the role of empirical studies and measurement within software engineering and the mechanisms needed to apply them successfully This volume presents the proceedings of a workshop whose purpose was to gather those members of the software engineering community who support an engineering approach based upon empirical studies to provide an interchange of ideas and paradigms for research The papers in the volume are grouped into six parts corresponding to the workshop sessions The experimental paradigm in software engineering Objectives and context of measurement experimentation Procedures and mechanisms for measurement experimentation Measurement based modeling packaging for reuse reuse of models and technology transfer teaching and training Each part opens with a keynote paper and ends with a discussion summary The workshop served as an important event in continuing to strengthen empirical software engineering as a major subdiscipline of software engineering The deep interactions and important accomplishments from the meeting documented in these proceedings have helped identify key issues in moving software engineering as a whole towards a true engineering discipline PUBLISHER S WEBSITE
