Mathematical Morphology in Geomorphology and GISci Behara Seshadri Daya Sagar, 2013-05-29 Mathematical Morphology in Geomorphology and GISci presents a multitude of mathematical morphological approaches for processing and analyzing digital images in quantitative geomorphology and geographic information science GISci Covering many interdisciplinary applications the book explains how to use mathematical morphology not only to perform quantitative morphologic and scaling analyses of terrestrial phenomena and processes but also to deal with challenges encountered in quantitative spatial reasoning studies For understanding the spatiotemporal characteristics of terrestrial phenomena and processes the author provides morphological approaches and algorithms to Retrieve unique geomorphologic networks and certain terrestrial features Analyze various geomorphological phenomena and processes via a host of scaling laws and the scale invariant but shape dependent indices Simulate the fractal skeletal based channel network model and the behavioral phases of geomorphologic systems based on the interplay between numeric and graphic analyses Detect strategically significant sets and directional relationships via quantitative spatial reasoning Visualize spatiotemporal behavior and generate contiguous maps via spatial interpolation Incorporating peer reviewed content this book offers simple explanations that enable readers even those with no background in mathematical morphology to understand the material It also includes easy to follow equations and many helpful illustrations that encourage readers to implement the ideas *River, Coastal and Estuarine Morphodynamics* Gary Parker, Marcelo H. García, 2005-09-29 The proceedings of the 4th Symposium on River Coastal and Estuarine Morphodynamics offers the latest research results concerning quantitative modelling of the interaction of water and sediment and the shapes this interaction makes in rivers watersheds estuaries the coast the continental shelf and the deep sea Morphodynamics is the study of the evolution of landscape and seascape features from small scale to large

Environmental Modelling John Wainwright, Mark Mulligan, 2013-04-01 Simulation models are an established method used to investigate processes and solve practical problems in a wide variety of disciplines Central to the concept of this second edition is the idea that environmental systems are complex open systems The authors present the diversity of approaches to dealing with environmental complexity and then encourage readers to make comparisons between these approaches and between different disciplines Environmental Modelling Finding Simplicity in Complexity 2nd edition is divided into four main sections An overview of methods and approaches to modelling State of the art for modelling

environmental processes Tools used and models for management Current and future developments The second edition evolves from the first by providing additional emphasis and material for those students wishing to specialize in environmental modelling This edition Focuses on simplifying complex environmental systems Reviews current software tools and techniques for modelling Gives practical examples from a wide variety of disciplines e g climatology ecology hydrology geomorphology and engineering Has an associated website containing colour images links to WWW resources and chapter support pages including data sets relating to case studies exercises and model animations This book is suitable for final year undergraduates and postgraduates in environmental modelling environmental science civil engineering and biology who will already be familiar with the subject and are moving on to specialize in the field It is also designed to appeal to professionals interested in the environmental sciences including environmental consultants government employees civil engineers geographers ecologists meteorologists and geochemists

Self-organization in Complex Ecosystems Ricard V. Solé, Jordi Bascompte, 2006 Describing a theoretical view of ecosystems based on how they self organise to produce complex patterns this book focuses on very simple models that despite their simplicity encapsulate fundamental properties of how ecosystems work The Leading Edge, 1998 River Confluences, Tributaries and the Fluvial Network Stephen Rice, Andre Roy, Bruce Rhoads, 2008-09-02 River Confluences and the Fluvial Network brings together state of the art thinking on confluence dynamics tributary impacts and the links between processes at these scales and river network functions The book is unique in focus content scope and in bringing together engineering ecological and geomorphological approaches to the three key areas of river system science Taking a global approach this multi authored text features a team of carefully selected internationally renowned experts who have all contributed significantly to recent ground breaking advancements in the field Each chapter includes a comprehensive review of work to date highlighting recent discoveries and the main thrust of knowledge previously unpublished research and case studies challenges and questions detailed references as well as a forward looking assessment of the state of the science

Integrating Hydrology, Ecosystem Dynamics, and Biogeochemistry in Complex Landscapes J. D. Tenhunen, P. Kabat, 1999-08-03 In recent decades the biosphere has become increasingly stressed often beyond the point where the internal structure and function of ecosystems are sustained We have experienced an intensified exploration of natural system

resources to support agricultural and forest production to provide water for human consumption to supply the needs of industrial processes and to provide in addition attractive diverse landscapes for recreation and tourism Exceeding thresholds via anthropogenic disturbance that results in degradation of ecosystems is dangerous since the system level effects and feedbacks e g soil erosion famine polluted drinking water etc are highly undesirable Finding appropriate compromises in resource use that satisfy existing competitive interests and result in sound environmental management especially in densely populated regions requires an improved understanding of the trade offs that accompany changes in exploitation or altered resource allocation at regional and landscape scales Progress on landscape level understanding of coupled water carbon and nitrogen budgets is limited by a lack of commitment to a rigorous development and application of synthetic techniques e g strongly linked remote sensing studies geographic information system applications computer simulation modeling and ecosystem experimentation more than by basic site level measurement alone Possible research approaches that will contribute to new use of ecosystem knowledge in a landscape and regional context were considered by this Dahlem Workshop The importance of conducting improved landscape and regional assessment of ecosystem function as input to global scale efforts of the International Geosphere Biosphere Programme is a major theme of this book
