Olson, 2012-01-06. In the past vertical integration was a way to gain efficiency in supply chains. Today vertical integration doesn't work as well because specialty organizations have developed to perform specific tasks very efficiently. Efficiency through supply chains is achieved today by linking specialists throughout the vertical business hierarchy. This sort of linkage is possible because of the technology that has developed which facilitates it making today supply chains both faster and more cost effective. *Supply Chain Information Technology* surveys the different systems that are used by businesses to achieve these efficiencies. The target market for this book is practitioners in the supply chain management field, one of the fastest growing fields in our economy. The rapid growth in computer technology provides supply chains with valuable tools to better coordinate and control their operations. This book describes how these systems provide supply chains with information system support. The design of these systems and the tasks they perform are demonstrated with the help of analytic techniques and models that are used in the book. **Computerworld**, 2003-03-31. For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers worldwide. Computerworld's award winning Web site Computerworld.com, twice monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network. *Work, Workflow and Information Systems* William B. Rouse, Andrew P. Sage, 2007. This volume brings together several perspectives on the nature of work processes in enterprises and how information systems can best support these processes. The genesis of this idea was the shared interests of the authors in how enterprises improve and change. The shared belief is that change of enterprises relates to change of work processes and the success of such changes relates to how work processes are supported by information systems. Thus the papers in this volume address both the nature of work and the design of information systems to support work. This volume is divided into two main sections: work and workflow and information systems. There are three papers in each section. The disciplines represented across these six papers include management, engineering, computing and architecture. These four disciplines pursue work, workflow and information systems from quite different perspectives: management to represent business practices and processes, engineering to represent the physical flows in the system, computing to represent the information flows and architecture to represent human flows within and among physical spaces. Enterprises of course include all these types of flows. **SAP Basis Administration Handbook, NetWeaver Edition** Ranjit Mereddy, 2011-11-17.
