Environmental Design Environmental Design:

Environmental Design Richard P. Dober, 1969 **Environmental Design Evaluation** Arnold Friedmann, Craig Zimring, Ervin Zube, 2013-12-14 As the nature of the field of environment behavior relations is interdisciplinary the collaboration of three persons of diverse professional backgrounds in writing this book is therefore not surprising This collaboration started in 1972 with the offering of a graduate seminar Environment Behavior and Design Evaluation at the University of Massachusetts Several research projects dealing with design evaluation which have been conducted at the University are also included as case studies in this book Chapter III the ELEMNR study and the Visitor Center study Two of the authors have worked as part of the instructional team in the seminar and all of the authors have participated in varying degrees in the ELEMNR Project The authors backgrounds in design psychology and landscape architecture suggest by example that professionals with diverse backgrounds but a common interest in environment behavior problems can indeed learn to communicate and to collaborate Since design evaluation is a new field and very little specific literature on the subject exists to date we hope this book fills a current need **Environmental Design Research Directions** Gary T. Moore, D. Paul Tuttle, Sandra C. Howell, 1985

Environmental Design Jennifer A. E. Shields, Michael Lucas, Ellen Burke, 2019-08-28 *Environmental Design* An Anthology features diverse readings that explore the interdependency of humans and the built environment Readers discover how environments affect human behavior how humans impact environments and the myriad factors to consider when designing or constructing new buildings landscapes or urban spaces The readings emphasize the impact of decisions made by designers builders and occupants on the health of human and natural systems

History and Precedent in Environmental Design Anatol Rapoport, 1990-07-31 This book is about a new and different way of approaching and studying the history of the built environment and the use of historical precedents in design However although what I am proposing is new for what is currently called architectural history both my approach and even my conclusions are not that new in other fields as I discovered when I attempted to find supporting evidence In fact of all the disciplines dealing with various aspects of the study of the past architectural history seems to have changed least in the ways I am advocating There is currently a revival of interest in the history of architecture and urban form a similar interest applies to theory vernacular design and culture environment relations After years of neglect the study of history and the use of historical precedent are again becoming important However that interest has not led to new approaches to the subject nor have its bases been examined This I try to do In so doing I discuss a more rigorous and I would argue a more valid way of looking at historical data and hence of using such data in a theory of the built environment and as precedent in environmental design Underlying this is my view of Environment Behavior Studies CEBS as an emerging theory rather than as data to help design based on current theory Although this will be the subject of another book a summary statement of this position may be useful **Environmental Design Perspectives** Wolfgang F. E. Preiser, 2016-02-05 The purpose of this title

first published in 1972 was to bring into focus the work and viewpoints of individuals and groups that were engaged in man environment research design and education Reflecting the multidisciplinary nature of the field of man environment relations topics range from aspects of environmental design methodology to research applications from the behavioural sciences This title will be of interest to students of architecture The Environments of Architecture Randall Thomas,Trevor Garnham,2007 This well illustrated think piece provides a much needed and topical philosophical introduction to the place of environmental design in architecture Written by highly respected authors this is an excellent guide for practitioners students and academics Emerging Methods in Environmental Design and Planning Gary T. Moore,1970-01-01 **Environmental Design Research** Wolfgang Preiser,2018-12-07 First published in 1973 this two volume set summarises and structures the contributions by researchers at the Fourth International EDRA Conference held in April 1973 The second volume focuses on the symposia and invited papers which were theory orientated The symposia comprehensively assessed the status of contemporary knowledge as well as potential future directions in the respective fields contributing to environmental design research This volume also provides summaries of the workshops which explored problem solving processes and offered methodological applications to environmental analysis and other topics of concern This book will be of interest to students of architecture and design Environmental Design Environmental Design Research Association. Conference,1979 With Man in Mind Constance Perin,1970 Although a responsible and welcome critical literature in the social sciences has in recent years been measuring the human costs of urban renewal and environmental degradation telling the designer what to avoid does not necessarily enlighten him about what to do The designers too have been transforming their attitudes moving away from the rhetorical toward the socially aware and the scientific The two groups are readier to meet now than ever before and if they do so in the ways put forth in this book with man in mind then we will be better able to bring our environmental technologies into human service With Man in Mind is not however a handbook or manual of techniques ready made it is instead an argument for changing the terms of our discourse about man and environment so that we can do interdisciplinary research on questions that matter With the questioning of the ideas in this book collaboration may finally begin

Environmental Design Research Jonathan King,1979 *Introduction to Environmental Design* Anthony C. Antoniades,1976 EDRA 1 Henry Sanoff,Sidney Cohn,2021-04-08 Originally published in 1970 EDRA 1 is a record of the conference proceedings of the 1st annual Environmental Design Research Association conference The papers featured in this volume represent the proceedings of the conference and are concerned mainly with contributions of scientific disciplines towards the creation of improved methods of problem solving environmental design as well as understanding the nature of human responses to the environment The papers included in this volume focus on developing models and methods towards a framework of coherence and definable structure of environmental design with the ultimate objective of achieving an optimum environment for man This volume will be of great interest to planners architects and academics of urbanisation alike

Although published over 40 years ago the book's content is still as relevant and interesting today as it was at the time of publication Sustainable Environmental Design in Architecture Stamatina Rassa, Panos M. Pardalos, 2011-11-01 Over the last few decades there have been dramatic improvements in the understanding and research of environmental design. Numerous methods have been developed to enhance architectural design in order for it to be more energy efficient, sustainable and health enhancing. This book presents several theories and techniques that can be used to improve how buildings are engineered and designed in order to utilize more sustainable construction methods while promoting the health of the building's occupants. Contributions to the study of environmental design have come from a diversity of fields including applied mathematics, optimization, computer science, medical research, psychology, management science, architecture and engineering. The techniques developed in these areas of research can be used to increase building performance, occupant satisfaction, productivity and well-being and reducing the incidence of health conditions and chronic diseases related to the use of a designed space. This book provides architectural practitioners, civil engineers as well as other interdisciplinary researchers with the techniques needed to design, implement and test for sustainability and health promotion in new or existing structures. *Environmental Design Research* Marguerite Villecco, Michael Brill, 1981 *EDRA 13* Environmental
