Environmental Movements And Waste Infrastructure:

Environmental Movements and Waste Infrastructure Christopher Rootes, Liam Leonard, 2013-09-13 As rates of consumption grow the problem of waste management has increased significantly National and local waste authorities seek to manage such problems through the implementation of state regulation and construction of waste infrastructure including landfills and incinerators These however are undertaken in a context of increasing supra state regulatory frameworks and directives on waste management and of increasing activity by multi national corporations and are increasingly contested by activists in the affected communities *Environmental Movements and Waste Infrastructure* sheds new light on the structures of political opportunity that confront environmental movements that challenge the state or corporate sector A series of case studies on collective action campaigns from the EU US and Asia is elaborated in order to illuminate the similarities and differences between anti incinerator protests within different states Several contributions share a concern about cross border or transnational waste flows Each case study looks beyond its initial local frame of reference and goes on to interrogate assumptions about NIMBYism or localism demonstrating the wider linkages and networks established by both grassroots campaigns and state and multinational agencies This book was previously published as a special issue of *Environmental Politics* Special Issue Environmental Movements and Waste Infrastructure Christopher Rootes, 2009

Putting Social Movements in Their Place Doug McAdam, Hilary Boudet, 2012-05-07 This book reports the results of a comparative study of twenty communities earmarked for environmentally risky energy projects Local Environmental Politics in China Genia Kostka, 2017-07-05 Knowledge and insight in national environmental governance in China is widespread However increasingly it has been acknowledged that the major problems in guiding the Chinese economy and society towards sustainability are to be found at the local level This book illuminates the fast changing dynamics of local environmental politics in China a topic only marginally addressed in the literature In the course of building up an institutional framework for environmental governance over the last decade local actors have generated a variety of policy innovations and experiments In large measure these are creative responses to two main challenges associated with translating national environmental policies into local realities The first such challenge is apolicy implementation gap stemming from the absence of the state capacity necessary to the implementation of environmental measures The second challenge refers to the need for local non state actors to engage in environmental management oftentimes such a participation gap contributes to implementation failures In recent years we have seen a multitude of initiatives within China at the provincial level and below designed to bridge both gaps Hence the central aim of this book is to assess these experiments and innovations in local environmental politics This book was originally published as a special issue of the *Journal of Environmental Policy and Planning* *Waste and Distributive Justice in Asia* Takashi Nakazawa, 2018-01-19 Conflicts over waste disposal facility siting is a pressing issue not only in developed countries but also in fast growing

countries that face drastic waste increase and rapid urbanisation How to address distributive justice has been one of the biggest concerns This book examines what determines the influence of distributive justice in siting policy In the 23 wards of Tokyo one idea of distributive justice known as In Ward Waste Disposal IWWD emerged amid the ongoing garbage crisis in the early 1970s IWWD was adopted as a significant principle but its influence waxed and waned over time until the idea was finally abandoned in 2003 To unravel causes and mechanisms behind the changing influence of IWWD this book adopts a framework that considers not only ideational causes but also the power struggles between rationally calculating actors as well as the influence of external events and environments By combining an in depth case study with an integrative theoretical framework this book tells a thought provoking story of the changing influence of IWWD in a deep comprehensive and consistent way This book provides significant insights and lessons for both academics and practitioners Biodegradable Waste Processing for Sustainable Developments Arbind Prasad,Atanu Kumar Paul,2024-08-07 The text comprehensively highlights the key issues surrounding the implementation of waste to energy systems such as site selection regulatory aspects and financial and economic implications It further discusses environmental aspects of food waste to energy conversion microbial fuel cells MFCs for waste recycling and energy production and valorization of algal blooms and their residues into renewable energy This book Discusses the environmental impact of waste to energy and sustainable waste to energy technologies in a comprehensive manner Presents life cycle assessment studies and perspective solutions in waste to energy sectors Covers applications of smart materials in thermal energy storage systems Explains thermo chemical technologies for recycling plastic waste for energy production and recovery of valuable products Illustrates biorefineries and case studies for sustainable waste valorization It is primarily written for senior undergraduate nad graduate students and academic researchers in the fields of mechanical engineering environmental engineering energy studies production engineering industrial engineering and manufacturing engineering Waste Management in Developing Countries Hassan El Bari,Cristina Trois,2023-06-01 This book presents state of the art solid waste management in developing countries It outlines the impact of poor solid waste management on human health and the environment and examines appropriate solid waste management technologies for the developing world Contributions define waste recovery in a circular economy context and the informal sector s role describe how sustainable and integrated solid waste management in developing countries contributes to reducing greenhouse gases and their effect on climate change and analyze the financial and legislation aspects of solid waste management Waste Management in Developing Countries will be an essential reference for researchers scientists and students in waste management and environmental sciences as well as waste management practitioners policymakers municipal officials and related industry professionals **Routledge Handbook of Environmental Policy in China** Eva Sternfeld,2017-06-12 During the last few decades China has accomplished unprecedented economic growth and has emerged as the second largest economy in the world This economic miracle has led hundreds of millions of people out of

poverty but has also come at a high cost Environmental degradation and the impact of environmental pollution on health are nowadays issues of the greatest concern for the Chinese public and the government The Routledge Handbook of Environmental Policy in China focuses on the environmental challenges of China's rapidly growing economy and provides a comprehensive overview of the policies developed to address the environmental crisis Leading international scholars and practitioners examine China's environmental governance efforts from an interdisciplinary perspective Divided into five parts the handbook covers the following key issues Part I Development of Environmental Policy in China Actors and Institutions Part II Key issues and Strategies for Solution Part III Policy Instruments and Enforcement Part IV Related Policy Fields Conflicts and Synergies Part V China's Environmental Policy in the International Context This comprehensive handbook will be an invaluable resource to students and scholars of environmental policy and politics development studies Chinese studies geography and international relations

Waste Policy Alexander Gillespie, 2015-08-28 From human waste to nuclear waste the question of how we must manage what we no longer want in terms of either recycling or disposal is one of the most pressing issues in environmental law Alexander Gillespie addresses the gaps in previous literature
