Entity Resolution And Information Quality:

Entity Resolution and Information Quality John R. Talburt, 2011-01-14 Entity Resolution and Information Quality presents topics and definitions and clarifies confusing terminologies regarding entity resolution and information quality. It takes a very wide view of IQ including its six domain framework and the skills formed by the International Association for Information and Data Quality IAIDQ. The book includes chapters that cover the principles of entity resolution and the principles of Information Quality in addition to their concepts and terminology. It also discusses the Fellegi Sunter theory of record linkage, the Stanford Entity Resolution Framework and the Algebraic Model for Entity Resolution, which are the major theoretical models that support Entity Resolution. In relation to this, the book briefly discusses entity based data integration EBDI and its model, which serve as an extension of the Algebraic Model for Entity Resolution. There is also an explanation of how the three commercial ER systems operate and a description of the non-commercial open source system known as OYSTER. The book concludes by discussing trends in entity resolution research and practice. Students taking IT courses and IT professionals will find this book invaluable. First authoritative reference explaining entity resolution and how to use it effectively. Provides practical system design advice to help you get a competitive advantage. Includes a companion site with synthetic customer data for applicatory exercises and access to a Java based Entity Resolution program.

Entity Information Life Cycle for Big Data John R. Talburt, Yinle Zhou, 2015-04-20 Entity Information Life Cycle for Big Data walks you through the ins and outs of managing entity information so you can successfully achieve master data management MDM in the era of big data. This book explains big data's impact on MDM and the critical role of entity information management system EIMS in successful MDM. Expert authors Dr John R Talburt and Dr Yinle Zhou provide a thorough background in the principles of managing the entity information life cycle and provide practical tips and techniques for implementing an EIMS. Strategies for exploiting distributed processing to handle big data for EIMS and examples from real applications. Additional material on the theory of EIIM and methods for assessing and evaluating EIMS performance also make this book appropriate for use as a textbook in courses on entity and identity management, data management, customer relationship management CRM and related topics. Explains the business value and impact of entity information management system EIMS and directly addresses the problem of EIMS design and operation, a critical issue organizations face when implementing MDM systems. Offers practical guidance to help you design and build an EIM system that will successfully handle big data. Details how to measure and evaluate entity integrity in MDM systems and explains the principles and processes that comprise EIM. Provides an understanding of features and functions an EIM system should have that will assist in evaluating commercial EIM systems. Includes chapter review questions, exercises, tips and free downloads of demonstrations that use the OYSTER open source EIM system. Executable code, Java jar files, control scripts and synthetic input data illustrate various aspects of CSRU life cycle such as identity capture, identity update and assertions.

Entity Resolution in the Web of Data Vassilis Christophides, Vasilis Efthymiou, Kostas Stefanidis, 2015-08-01 In recent years several knowledge bases have been built to enable large scale knowledge sharing but also an entity centric Web search mixing both structured data and text querying These knowledge bases offer machine readable descriptions of real world entities e g persons places published on the Web as Linked Data However due to the different information extraction tools and curation policies employed by knowledge bases multiple complementary and sometimes conflicting descriptions of the same real world entities may be provided Entity resolution aims to identify different descriptions that refer to the same entity appearing either within or across knowledge bases The objective of this book is to present the new entity resolution challenges stemming from the openness of the Web of data in describing entities by an unbounded number of knowledge bases the semantic and structural diversity of the descriptions provided across domains even for the same real world entities as well as the autonomy of knowledge bases in terms of adopted processes for creating and curating entity descriptions The scale diversity and graph structuring of entity descriptions in the Web of data essentially challenge how two descriptions can

be effectively compared for similarity but also how resolution algorithms can efficiently avoid examining pairwise all descriptions The book covers a wide spectrum of entity resolution issues at the Web scale including basic concepts and data structures main resolution tasks and workflows as well as state of the art algorithmic techniques and experimental trade offs

Proceedings of ... ACM/IEEE-CS Joint Conference on Digital Libraries ,2007 *Data Matching* Peter

Christen,2012-07-04 Data matching also known as record or data linkage entity resolution object identification or field matching is the task of identifying matching and merging records that correspond to the same entities from several databases or even within one database Based on research in various domains including applied statistics health informatics data mining machine learning artificial intelligence database management and digital libraries significant advances have been achieved over the last decade in all aspects of the data matching process especially on how to improve the accuracy of data matching and its scalability to large databases Peter Christen s book is divided into three parts Part I Overview introduces the subject by presenting several sample applications and their special challenges as well as a general overview of a generic data matching process Part II Steps of the Data Matching Process then details its main steps like pre processing indexing field and record comparison classification and quality evaluation Lastly part III Further Topics deals with specific aspects like privacy real time matching or matching unstructured data Finally it briefly describes the main features of many research and open source systems available today By providing the reader with a broad range of data matching concepts and techniques and touching on all aspects of the data matching process this book helps researchers as well as students specializing in data quality or data matching aspects to familiarize themselves with recent research advances and to identify open research challenges in the area of data matching To this end each chapter of the book includes a final section that provides pointers to further background and research material Practitioners will better understand the current state of the art in data matching as well as the internal workings and limitations of current systems Especially they will learn that it is often not feasible to simply implement an existing off the shelf data matching system without substantial adaption and customization Such practical considerations are discussed for each of the major steps in the data matching process **Data Warehousing and Mining** ,2008 This collection offers tools designs and outcomes of the utilization of data mining and warehousing technologies such as algorithms concept lattices multidimensional data and online analytical processing With more than 300 chapters contributed by over 575 experts from around the globe this authoritative collection will provide libraries with the essential reference on data mining and warehousing Provided by publisher High Quality Entity Resolution with Adaptive Similarity Functions Rabia Turan,2011 Real world datasets often contain missing erroneous and duplicate data If such problems with dataset are not corrected the analysis results on it might lead to wrong decisions Due to practical significance of the data quality problem many creative techniques have been proposed in the past to address such problems In this thesis we address one such data cleaning challenge called entity resolution that deals with ambiguous

references in data and whose task is to identify all references that co refer In this thesis we exploit additional information sources to improve the disambiguation quality and overcome the limitations of feature based approaches Implicit relationships between entities is one such information source We exploit relationship analysis The approach we utilize views data as an entity relationship graph and rely on measuring the connection strength CS among various entities in the graph by using a connection strength model We propose a new adaptive similarity function that improves the quality of these approaches by adaptively learning the CS measure using the available training data Another information source is the web We propose an approach that utilizes web querying to measure the correlation information between entities We also develop a classifier that converts the web based correlation statistics into co refer or do not co refer decisions The classifier is based on skylines and leverages the fact that the classification results are utilized in clustering Our extensive experiments show that the proposed techniques have significant improvement over the state of the art approaches Entity resolution solutions often produce results consisting of objects whose attributes may contain uncertainty This uncertainty is frequently captured in the form of a set of multiple mutually exclusive value choices for each uncertain attribute along with a measure of probability for alternative values However the applications built on top of such data requires deterministic answers Thus we propose a linear time algorithm that finds a deterministic answer set which maximizes the expected F_{α} measure of selection queries on top of such a probabilistic representation The proposed solution gets near optimal results
