Environmental Biotechnology Gareth M. Evans, Judith C. Furlong, 2003-06-13 The application of biologically engineered solutions to environmental problems has become far more readily acceptable and widely understood However there remains some uncertainty amongst practitioners regarding how and where the microscopic functional level fits into the macroscopic practical applications It is precisely this gap which the book sets out to fill Dividing the topic into logical strands covering pollution waste and manufacturing the book examines the potential for biotechnological interventions and current industrial practice with the underpinning microbial techniques and methods described in context against this background Each chapter is supported by located case studies from a range of industries and countries to provide readers with an overview of the range of applications for biotechnology Essential reading for undergraduates and Masters students taking modules in Biotechnology or Pollution Control as part of Environmental Science Environmental Management or Environmental Biology programmes It is also suitable for professionals involved with water waste management and pollution control **ADVANCES IN ENVIRONMENTAL BIOTECHNOLOGY** ,2025 **Environmental Biotechnology** Lawrence K. Wang, Volodymyr Ivanov, Joo-Hwa Tay, Yung-Tse Hung, 2010-04-05 The past 30 years have seen the emergence of a growing desire worldwide that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Since pollution is a direct or indirect consequence of waste production the

seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste. However, as long as waste continues to exist, we can only attempt to abate the subsequent pollution by converting it to a less noxious form. Three major questions usually arise when a particular type of pollution has been identified: 1. How serious is the pollution? 2. Is the technology to abate it available? and 3. Do the costs of abatement justify the degree of abatement achieved? This book is one of the volumes of the Handbook of Environmental Engineering series. The principal intention of this series is to help readers formulate answers to the last two questions above. The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control. However, the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken.

Environmental Biotechnology Rouf Ahmad Bhat, Moonisa Aslam Dervash, Khalid Rehman Hakeem, Khalid Zaffar Masoodi, 2022-06-30. This book provides a review of innovative and novel biotechnological techniques that can be implemented to assess, analyze, and mitigate harmful pollutants and wastes that result from agricultural and industrial operations. It helps to meet the much needed demand for improvement of low cost technologies that tackle pollution problems scientifically for the safeguard of the environment, focusing on bioremediation solutions that also create useful and renewable forms of energy. The biotechnological interventions discussed in the volume include approaches involving genomics, proteomics, transcriptomics, metabolomics, and fluxomics. In addition, biological agents such as microalgae, bacteria, fungi, and bacteriophage, which can also prove to be helpful in the elimination of wastes, are explored. Topics in Environmental Biotechnology: Sustainable Remediation of Contamination in Different Environs include the associated consequences and hazards from agricultural and industrial waste and a variety of bioremediation measures, including the use of bioaugmentation, biosensors, challenges of biofuel production, and more. The book is directed to researchers, scientists, industrialists, farmers, agricultural waste management authorities, as well as to faculty and students, and aims to help implement these novel technologies for environmental stability.
