Human Population and Demographics

Objectives:

- Assess the scope of human population growth.
 - Global population at 7 billion and adding about 3 people every second.
 - Global growth rate currently stands at 1.2%.
 - Rising population can deplete resources, intensify pollution, stress social systems, or degrade ecosystems, such that natural environment or our quality of life decline.
- Evaluate how human population, affluence and technology affect the environment.
 - Rising population and rising affluence (leading to greater consumption) each increase environmental impact. Technological advances have frequently worsened environmental degradation, but they can also help mitigate our impact.
- Explain and apply the fundamentals of demography
 - Demography applies the principles of population ecology to the statistical study of human populations.
 - Demographers study size, density, distribution, age structure, and sex ratios of populations, as well as rates of birth, death, immigration, and emigration.
 - Total fertility rate (TFR) contributes greatly to change in a population's size.
- Outline and assess the concept of demographic transition
 - The demographic transition model explains why population growth has slowed in industrialized nations. Industrialization and urbanization have reduced the economic need for children, while education and the empowerment of women have decreased unwanted pregnancies. Parent in developed nations choose to invest in quality of life rather than quantity of children.
 - The demographic transition may or may not proceed to completion in all of today's developing nations. Whether it does is of immense importance for the quest for sustainability.
- Describe how wealth and poverty, the status of women, and family planning programs affect population growth.
 - When women are empowered and achieve equality with men, fertility rates fall and children tend to be better cared for, healthier and better educated.
 - Family planning programs and reproductive education have successfully reduced population growth in many nations.
 - Poorer societies tend to have higher population growth rates than do wealthier societies.
 - The high consumption rates of affluent societies may make their ecological impact greater than that of poorer nations with larger populations.
- Characterize the dimensions of the HIV/AIDS epidemic.
 - About 40 million people worldwide are infected with HIV/AIDS, of which 27 million live in sub-Saharan Africa.
 - Epidemics that claim large numbers of young and productive members of society influence population dynamics and can have severe social and political ramifications.
- Articulate your thoughts on statements that deal with ethical issues about population and the environment.
- Identify possible environmental, social, political and economic effects of a growing world population.
- Explain the cause and effect relationships between environmental, social, political and economical issues and the growing world population.
- Understand how certain events from the past related to the environment, food and agriculture, public and reproductive health, industry/transportation, social justice, and women's roles have influenced population.
