Visualizing and Modeling Spatial Data Uncertainty Hyeonmo Koo, 2018 This dissertation extends the understanding of spatial data uncertainty which inevitably exists in any process of Geographic Information Sciences involving measuring representing and modeling the world This dissertation consists of three specific sub topics in visualizing and modeling spatial data uncertainty First a framework for attribute uncertainty visualization is suggested based on bivariate mapping techniques and this framework is implemented in a popular GIS environment The framework and implementation support many visual variables that have been investigated in the literature This research outcome can provide flexibility to enhance communication and visualization effectiveness for uncertainty visualization The second sub topic is a development of optimal map classification methods by simultaneously considering attribute estimates and their uncertainty This study expands the discussion of constructing an optimal map classification result in which data uncertainty is incorporated in a map classification process This method utilizes a shortest path problem in an acyclic network based on dissimilarity measures with various cost and objective functions Finally modeling positional uncertainty acquired through street geocoding is investigated to understand potential factors of the uncertainty and then to identify impacts of the uncertainty on spatial analysis results This study accounts for spatial autocorrelation among geocoded points in a modeling process which has been barely included in this type of modeling This research has contributions to increasing explanation and to extending geocoding uncertainty modeling by suggesting additional covariates and considering spatial autocorrelation

### **Uncertainty in Spatial Data Measures, Models, and Structures** Ashton Myles

Shortridge,2000      Uncertainty Modelling in Information Management and Decision Making Cengiz Kahraman,2014 This ebook incorporates excellent quality submissions that focus on providing a mixture of theoretical and practical contributions The research work presented in these papers highlights that social media are playing a rapidly expanding role in both companies and in teaching and learning The aim of this ebook is to provide a broad understanding of the significance that uncertainty modelling in the context of managing information resources and decision making process plays The techniques for uncertainty modelling and analysis in engineering presents appropriate analytical and useful tools      *Modeling and Visualizing Spatial Uncertainty Using Fuzzy Logic and Monte Carlo Simulation* Trevor John Davis,1994

**Uncertainty Quantification and Model Calibration** Jan Peter Hessling,2017-07-05 Uncertainty quantification may appear daunting for practitioners due to its inherent complexity but can be intriguing and rewarding for anyone with mathematical ambitions and genuine concern for modeling quality Uncertainty quantification is what remains to be done when too much credibility has been invested in deterministic analyses and unwarranted assumptions Model calibration describes the inverse operation targeting optimal prediction and refers to inference of best uncertain model estimates from experimental calibration data The limited applicability of most state of the art approaches to many of the large and complex calculations made today makes uncertainty quantification and model calibration major topics open for debate with rapidly growing interest from both science and technology addressing subtle questions such as credible predictions of climate heating      **Communication of uncertainty in spatial data to policy makers** M. Spear,J. Hall,R A (Richard) Wadsworth,Environmental Information Centre,1996      Fuzzy and Rough Set Approaches for Uncertainty in Spatial Data ,2010 The management of uncertainty in

databases is necessary for real world applications especially for systems involving spatial data such as geographic information systems Rough and fuzzy sets are important techniques that can be used in various ways for modeling uncertainty in data and in spatial relationships between data entities This chapter discusses various approaches involving rough and fuzzy sets for spatial database applications such as GIS

Canada. Atomic Energy Control Board, SENES Consultants Limited, 1985      The Spatial Data Quality Analysis in the Environmental Modelling Yang Li, 2002      Uncertainty Modeling for Structural Control Analysis and Synthesis National Aeronautics and Space Adm Nasa, 2018-11-22

The development of an accurate model of uncertainties for the control of structures that undergo a change in operational environment based solely on modeling and experimentation in the original environment is studied The application used throughout this work is the development of an on orbit uncertainty model based on ground modeling and experimentation A ground based uncertainty model consisting of mean errors and bounds on critical structural parameters is developed The uncertainty model is created using multiple data sets to observe all relevant uncertainties in the system The Discrete Extended Kalman Filter is used as an identification parameter estimation method for each data set in addition to providing a covariance matrix which aids in the development of the uncertainty model Once ground based modal uncertainties have been developed they are localized to specific degrees of freedom in the form of mass and stiffness uncertainties Two techniques are presented a matrix method which develops the mass and stiffness uncertainties in a mathematical manner and a sensitivity method which assumes a form for the mass and stiffness uncertainties in macroelements and scaling factors This form allows the derivation of mass and stiffness uncertainties in a more physical manner The mass and stiffness uncertainties of the ground based system are then mapped onto the on orbit system and projected to create an analogous on orbit uncertainty model in the form of mean errors and bounds on critical parameters The Middeck Active Control Experiment is introduced as experimental verification for the localization and projection methods developed In addition closed loop results from on orbit operations of the experiment verify the use of the uncertainty model for control analysis and synthesis in space
