ECG Holter Jan Adamec, Richard Adamec, 2008-12-14 For centuries the analysis of the heart rhythm has belonged to the foundations of medical art We know that doctors in ancient Tibet used the interpretation of the heart rate to draw prognostic conclusions somehow a modern rationale that deserves further attention The rapid advancement of science is providing more and more information about the details but the subatomic resolution of structures hides the risk and the complex procedures are fragmented into static impressions The same has happened to the ECG The revolutionary development acknowledged by the Nobel Prize for Einthoven led from the analysis of the dynamic heart rate to the static analysis of the heart stream curve It is only with the ECG Holter recording over longer periods that the cardiologists rediscovered the old dynamic With the continuous recording of the heart rate and its periodicity it became accessible to a new dimension a dimension that requires technically well defined foundations for accurate data collection detailed knowledge of the electrocardiologic particularities of arrhythmia and medical knowledge for

the translation of the results into a diagnostic synthesis With the ECG Holter the issue is no longer just to detect an arrhythmia but also to determine dynamic circumstance in which the critical event occurred In fact we investigate the trigger the event and the context and we have to integrate all of that information within the clinical picture from the pathology right through to the symptom indeed a multi dimensional task Rhythms and 12-Leads Pocket Guide Pam Allen,2017-08-07
