secure in the belief revealed by the scanning and transmission electron microscopes that they would never have to do that again. That lasted for 10 years. To round out the story we even have a chapter on what PowerPoint years. When we finally awoke it seemed that a lot had happened. Does the results and the annotated bibliography have been in particular people were trying to use the Handbook as a text updated and extended book even though it lacked the practical chapters needed. Glassy Materials Based Microdevices Giancarlo C. Righini, Nicoletta Righini, 2019-02-28. Microtechnology has changed our world since the last century when silicon microelectronics revolutionized sensor control and communication areas with applications extending from domotics to automotive and from security to biomedicine. The present century however is also seeing an accelerating pace of innovation in glassy materials as an example glass ceramics which successfully combine the properties of an amorphous matrix with those of micro or nano crystals offer a very high flexibility of design to chemists physicists and engineers who can conceive and implement advanced microdevices. In a very similar way the synthesis of glassy polymers in a very wide range of chemical structures offers unprecedented potential of applications. The contemporary availability of microfabrication technologies such as direct laser writing or 3D printing which add to the most common processes deposition lithography and etching facilitates the development of novel or advanced microdevices based on glassy materials. Biochemical and biomedical sensors especially with the lab on a chip target are one of the most evident proofs of the success of this material platform. Other applications have also emerged in environment food and chemical industries. The present Special Issue of Micromachines aims at reviewing the current state of the art and presenting perspectives of further development. Contributions related to the technologies glassy materials design and fabrication processes characterization and eventually applications are welcome.
