Saltmarsh's Essential Guide to Food Additives Mike Saltmarsh, 2020-10-30 Food additives play a vital role in allowing food manufacturers to provide the range of foods that are available in the developed countries of the world. Additives cover a considerable range from the recognisable sodium bicarbonate used to make cakes in the domestic kitchen to mono and diacetyltartaric esters of mono and diglycerides of fatty acids used as emulsifiers in commercial bread production. They include curcumin the yellow colour in turmeric, beeswax and citric acid the acid in citrus fruit as well as substances prepared synthetically. It has long been fashionable in the media to criticise additives and in so doing to lump them all together but this ignores their diversity, their vital role in food production and preservation and the extensive testing they have undergone before being approved. This book outlines why additives are used, the testing regime within Europe and a complete listing of all additives permitted within the EU. The law covering food additives in the EU which was harmonised in 1989 has been revised a number of times, most recently by the publication of Regulations 1333/2008 and 1129/2011. These Regulations have been amended a number of times with additives being removed or added. This fifth edition of the Guide brings it up to date with a revision of every chapter to reflect the current situation. Providing an invaluable resource for food and drink manufacturers, this book is the only work covering in detail every additive, its sources and uses. Those working in and around the food industry, students of food science and indeed anyone with an interest in what is in their food will find this a practical book full of fascinating details.

What's In This Stuff? Patricia Thomas, 2008-01-02 We all like to buy things that make our lives easier, keep us healthy and provide a bit of luxury. But few of us are aware that many of the products we buy every day are polluting our homes and bodies. In this fascinating and sometimes shocking book, Pat Thomas reveals that many widely used products contain a cocktail of cheap, poorly tested chemicals that are implicated in long-term health problems. Many of us now scan food labels for unwanted ingredients, yet we unthinkingly use toiletries and other products that contain a multitude of undesirable chemicals, believing that what we put on our bodies is not as influential to health as what we put in them. However, scientists now believe that household and beauty products and everyday foods expose us to a witches' brew of chemicals that wage a kind of chemical warfare against our bodies. Wide-ranging and practical, *What's In This Stuff?* examines everything from food additives, beauty products and household cleaners to pharmaceutical products and garden and pet supplies. It also contains a glossary of chemicals and E numbers, a list of the 50 chemicals you should definitely avoid and suggests non-toxic alternatives to conventional products.
